

Suggested Use

Dyna-Gro®

VERDURE

FEATURES

- An annual tetraploid ryegrass specifically bred for filling the winter feed gap.
- Very fast to first grazing and extremely high winter growth rate.
- Outstanding dry matter yields.
- Produces excellent quality silage and hay.
- Very good leaf to stem ratio.
- Easy to establish in oversown rundown pastures.
- Exceptionally rapid regrowth.

SCIENTIFIC NAME

Lolium multiflorum

PLANT CHARACTERISTICS

- Broadleaf tetraploid Annual

MATURITY

An Early – Mid maturing plant designed to produce good quality feed throughout Autumn, Winter and Early Spring. Days to flowering relative to Nui (0) - 3

AREA OF ADAPTION

Medium to High rainfall zones.
Cropping/pasture rotations.

COMPARABLE TO

Sungrazer T, Diamond T, Winterhawk, Vortex, Phantom, Rocket, Catapult, Sprinter, Flyer, Tetrone

SOIL TYPE

Verdure is well adapted to a wide range of fertility levels and soil profiles, but performs best in a well-drained loam. Tetraploid annuals will cope with short-term water-logging provided the growing tip is above water.

To maximise stand productivity, soil testing is advisable. Analyse soil and neutralise deficiencies with fertiliser and/or lime.

FERTILITY

Good base rates of phosphorus are necessary for maximum DM production especially during establishment phase. DM production is directly related to nitrogen availability. Consult your Landmark agronomist for nitrogen application rates.

SOWING

Sow at 20-30kg/ha alone or 5-15kg/ha when a component of a pasture blend. Sow seed no deeper than 1cm in a fine but firm seed bed. Sow into bared ground if direct drilling. Lightly harrow and roll to improve germination. Suitable for oversowing into an established stand. Pasture productivity is directly related to successful plant establishment.
