# Welcome

Welcome to the Premier Angus Dispersal Sale, the time has come for me to slow down a little and with Stu as busy as he is the decision to disperse the stud has been relatively easy. We both love breeding cattle and are proud of the progress we have made in the 10 years since switching from breeding Limousin to Angus. We look forward to fellow breeders having the opportunity to expand and develop the family lines we have bred over the years.

My philosophy has always been to breed the best females we can using proven genetics that we think will work in the Australian environment. Replacement breeders have always been selected on type and our breeding decisions have always endeavoured to create an even line of good uddered females which produce growthy calves that are long, stout and sound. We have used our own bulls where practical, I think it is easier to predict calf outcomes when you have the advantage of knowing how individual females within the herd breed.

We do note, but do not place great emphasis on EBVs. The accuracy and therefore the predictability of most sires and almost all dams is bound to change significantly until accuracies in the high 90s is achieved. We would be likely to use sires we feel phenotypically will complement our herd at the expense of using high indexing but low accuracy sires unlikely to predictably allow us to achieve the goals we strive.

We have several strong cow families, the most consistent are the Dream Y301 line , the Jestress D901 line, and the Lowan B207 line.

Vermont Dream Y301 was purchased in partnership at the Vermont Dispersal as a proven breeder and has produced many outstanding daughters, who are big, long fronted and balanced. We always thought our ideal females would be a further generation away from the Y301 daughters, the best of these daughters have produced outstanding progeny.

Vermont Jetstress D901 was also purchased at the Vermont Dispersal as a heifer. She has breed extremely well, produced many outstanding daughters, granddaughters and great-granddaughters. She is a moderate female who is still in production at 12 years of age.

St Pauls Lowan B207 was purchased privately in 2012. She has stamped her progeny with muscle, bone and strong heads with a broad muzzle. These traits are evident in later generations. She is still sound at 14 years of age although her breeding days are over.

Other significant purchases have been Carrington Park Dream D5, St Pauls Lola C108, St Pauls Wilcoola T47, Kenny's Creek Bara U44, Kansas Barbara D46 and Kansas Rita J117, all have contributed to our breeding programme. We also have imported embryos from the Schaff programme (SAV) in the USA, the best of these remain in the herd.

Last year we purchased Milwillah Napa N498 as a new herd sire to complement our own sires, the decision based on the phenotype and breeding success of his dam as much as on his own attributes. He has developed into a pretty handy bull, both he, and more than 70 of his progeny (all calves at foot) sell on sale day.

Once again we welcome you to our sale and hope you can find a female or two that will complement your herd.

*Fred, Michelle, Stuart and Annie Geard*

# Sale Notes

---

## Please Read Carefully

1. As the catalogue has been formatted on a certain date EBVs, especially but not exclusively new R calves will have regular EBV updates available on the Angus Australia website.
2. All spring calving females in the sale are open, autumn calvers including autumn Q heifers are PTIC and sold without calves at foot, and last years spring Q heifers who have not yet had the opportunity to breed have been independently examined and deemed fit for breeding by Dr Peter Armstrong (Vet) unless specified otherwise. We sell all animals without a breeding or soundness guarantee as per usual dispersal conditions.
3. All animals, including spring R calves have been parent verified. If either the sire or dam of an animal in the catalogue has no DNA profile the animal will be either only sire or dam verified.
4. All open females of breeding age will have a CIDR inserted approximately 3 days before the sale to aid with our management of many cycling females being in a confined area. It will be the responsibility of the purchaser to remove these devices, ideally approximately 1 week after the sale if you intend breeding on the next cycle or anytime within the first week after the sale if not going to breed immediately.
5. All females of breeding age have been drenched, and vaccinated with both 7 in 1 and Pestiguard prior to the Sale. Spring calvers have been vaccinated and boosted with Scourshield prior to calving. We consider these health treatments to be current as per our usual health protocols. Calves have had one 7 in 1 vaccination prior to the sale. Bulls have drenched and vaccinated with 7 in 1.
6. All registered "R" calves will be tattooed rather than freeze branded prior to the sale.
7. ET calves will be sold alongside their recipient dams. If you wish we will raise the calf until 7 month of age at your risk with no agistment charges provided you agree to sell the recipient for \$1500.00 immediately after the sale. The calves will be available to be picked up within 1 week from 1 /3/2021. Arrangements need to be made prior to Sale.
8. **Transport.** Joe Wilton of Joe Wilton Transport (0408 739 559) and Steve Smith from Dick Smith Transport (0428 636 236) will be on site to assist in arranging delivery.
9. Due to Covid 19 we have decided rather than having an Open Day we we will offer prospective purchasers inspection of the herd by appointment at a mutually convenient time. The cattle will also be available for viewing from 12 noon the day prior to the sale (Tuesday 6th October) and from 7am on Sale Day.
10. **Catering.** Complimentary barbecue and drinks will be available on Sale Day
11. **Transfers.** If indicated on the Buyers Instruction Sheet Angus Society Transfers will be at Premier Angus expense.
12. **Insurance.** Nutrien will have a representative present on Sale Day if you wish to insure your purchases .
13. **Accommodation.** Wagga or Holbrook are approximately 1/2 hour from the property, there are many options for accommodation.
14. Due to the current COVID 19 restrictions we have invited Mr Dick Whale of Independent Breeding and Marketing Services (IBMS) to inspect the herd. He is happy to give an independent unbiased assessment to prospective purchasers if the are unable to attend the sale. Deal directly with Mr Whale (0427 697 968) or rgwhale@bigpond.com
15. Directions to "MASCOT" See mud map inside back cover.

**Notes:** We kick the sale off with K16 as our lead cow. Phenotypically K16 is an outstanding individual, with tremendous volume, extra length, strong pelvic set up, a wide muzzle, exceptional feet and structure and a good nature. Her bull calves have been in strong demand for the commercial breeder and she consistently mothers bull calves with massive testicle size. Her dam T47 was a terrific Fullback cow and has consistently bred good functional females. K16 sells joined to Milwillah Napa N498. Please note K16 is a red gene carrier. K16 is currently raising a SimAngus calf that will not be in the sale due to being bred on consignment. AI to Peake Total Focus EVTMT794 on 23.5.2020 and depastured with Milwillah Napa N498 (NJWN498) on 04.06.2020

**Notes:** Exceptional donor from the famous Bara U44 dam. K15 is close to where we think an Angus cow should be. She is moderate framed, has huge capacity, strong muzzled, picture perfect udder, and plenty of muscle. She has some BT Right Time 24J ET calves in the sale. A much sort after prolific flushing donor with embryos being sold over the years to 5 different studs. A K15 son topped the Gilmandyke Sale in 2019. Her flush brother ASHK18 was used as a walking sire in the herd, with some nice daughters in the sale draft. Calf at foot ASHR134 Sire ASHP134 DOB 04.08.2020 Bull 46kg

**Notes:** If this were big game farming, G13 would be the matriarch lioness! G13 is considered one of the big three matriarchs in our herd. She is quite possibly the best Vermont Dream Y301 daughter to have ever come up for sale. G13 is not only blessed with a beautiful phenotype, but she is hands down a docility and foot improver. G13 is a breeder and has had as much if not more influence on our herd than any other female. She is the dam of ASHJ12 who is breeding the house down and has been used heavily in our herd. Her dam Y301 needs no introduction, with two daughters previously holding the Australian record price for an Angus female @ \$45,000 then \$48,000. Her daughters in the sale are phenomenal. G13 is a once in a generation female and her influence will be immense in the next herd she enters. AI to Milwillah Napa N498 (NJWN498) on 05.06.2020 and depastured with Milwillah Napa N498 (NJWN498) on 18.06.2020

**Notes:** H66 is considered another of the big three matriarchs of the herd. Her dam D901 was purchased as a heifer from the Vermont dispersal, and has proven to be an outstanding breeder. H66 has a unique pedigree whos sire we selected as a mature bull from Merchiston Angus in NZ. Merchiston Vision 564 is a massive bull with perfect feet and tremendous docility and volume. We inspected several 564 daughters at Merchiston, which consolidated our love for the bull. H66 has muscle, capacity, a great temperament, exceptional udder and has bred changing depth of heal in her progeny. If you are looking to breeding better feet, exceptional temperament and real cow to your herd, look to do this with H66. A female who will excel in a good season, but more importantly not fade in a bad one. Calf at foot ASHR152 Sire ASHP134 DOB 08.08.2020 Heifer 42kg

**Notes:** One of two Confidence x Y301 daughters to be offered. K42 is a prolific donor, who has extra length, capacity, excellent feet and structure. She has a proven calving easy tract record with progeny offering curve bending birth to growth, extra capacity, great feet and lamb like docility. Gilmandyke Angus purchased a number of embryos off us a few years ago and the K42s are the standouts. K42 suffered an injury to her left front foot a few years back and as a consequence of some fibrosis within the foot she walks with a slight limp. Post injury we decided to keep K42 open and flush her until she had recovered sufficiently to re-join. That time has come, and she has been joined to N498. Depastured with Milwillah Napa N498 (NJWN498) on 04.06.2020

**Notes:** The first of the B207 daughters to be offered. B207 although not in the sale is considered the 3rd Matriarch of the Premier Herd. We will display B207 at the sale but given her age (14 years)and a few ailments we feel her breeding life is over. B207 was purchased from St Pauls as our pick of their cow herd. B207 is one of the best Angus cows we have seen. B207 progeny are very distinctive to look at, they have strong heads with wide muzzles, a little extra bone and power. At 14 years old B207 has exceptional feet! J1 is our go to for breeding stud sires. She is the mother of M5 and M178, both used in the herd with great success, P110 sold to Mountain Valley Angus as a stud sire and Q12 sold as the pick of the autumn yearlings. J1 has extra muscle, a strong top, good feet and brilliant head and muzzle. She will have ET calves sired by Chisum 255 and GDAR Regulator in the sale. Calf at foot ASHR150 Sire ASHN7 DOB 08.08.2020 Bull 40kg

Notes: K62 is the 2nd of three A241 x Y301 flush sisters to be offered in the sale. K62 is an exceptional Angus female. She has massive rib and volume, combined with an exceptional udder, good feet and plenty of muscle. She is a wedgy female who is more moderate than her sisters K63 and K57. We had an unfortunate incident where we lost 9 stud heifers on a paddock of lucerne in 2019, one of which was K62 only natural heifer P175, this was a real shame as she was outstanding. She has made this up with a Chisum 255 heifer in the sale Q134, who we have put first up in the sale heifers. Q134 would be one of the best heifers we have bred to date. K62 is an outstanding female, and with a full sister selling for \$48,000, she will be in the sight of a lot of astute breeders. Calf at foot ASHR162 Sire ASHP134 DOB 14/8/20 Heifer 42kg.

**Notes:** N101 was the outstanding N drop female of 2017, and unfortunately lost her pregnancy as a heifer in the final trimester. Because of her quality we decided to keep her on and flush her. N101 was born a week earlier than her contemporaries and was a standout from there. She has massive capacity, extra bone and dimensions. She has 2 full siblings M2 and M6 who are outstanding. There is ET calves by Coonamble Hector in the sale. As fate has it, she was implanted with an embryo because of circumstance and will calve down an ASHG2 x EVTMT794 embryo calf. Although she has had a few stumbles throughout her early life, we think you will agree, she is one hell of a female. Due on 31.08.2020. Calf at foot ASHR185, ET calf DOB 29/08/20. Bull 40kg.

**Notes:** J2 is the oldest D46 daughter in the sale. D46 was a Kansas donor we purchased in one of their female reduction sales. She was a big volume, perfect uddered EXT daughter who breed well for us. J2 is a good Docklands daughter with a great skin. A son sold for stud duties this year to Harris Farms Angus in Gippsland. J2 has consistently bred well for us. J2 is currently raising a SimAngus calf that will not be in the sale due to being bred on consignment. AI to Peake Total Focus EVTm794 on 23.5.2020 and depastured with Milwillah Napa N498 (NJWN498) on 04.06.2020

**Notes:** Napa was purchased to complement or cow herd. The Napa type bull was on our radar for a few years. We were looking for a bull to add carcass quality, maintain or improve foot shape, strengthen the spine and keep the pelvic area square. We all know the proven value of Reality and what he offers, and after inspection of his dam H224 and what she has done in the Milwillah herd, we knew Napa was a bull that would add value to our cows. Napa is a bull we consider phenotypically and genetically outstanding. His unique blend of exceptional carcass figures, big scrotal, sound feet, muscle shape and muscle expression is not easily found in the cattle industry. Napa is a uniquely good bugger and we think he will do a lot of good for his next owner. Napa semen has been exported to New Zealand.

- 2. Instructions for despatch of consignments comprising more than one owner must be signed by each buyer; no instructions will be considered complete until all have signed.

# Notes

# UNDERSTANDING THE TRANSTASMAN ANGUS CATTLE EVALUATION (TACE)

## What is the TransTasman Angus Cattle Evaluation?

The TransTasman Angus Cattle Evaluation (TACE) is the genetic evaluation program adopted by Angus Australia for Angus and Angus infused beef cattle. TACE uses Best Linear Unbiased Prediction (BLUP) technology to produce Estimated Breeding Values (EBVs) of recorded cattle for a range of important production traits (e.g. weight, carcase, fertility).

TACE includes pedigree, performance and genomic information from the Angus Australia and New Zealand Angus Association databases to evaluate the genetics of animals across Australia and New Zealand.

TACE analyses are conducted by the Agricultural Business Research Institute (ABRI), using beef genetic evaluation software developed by the Animal Genetics and Breeding Unit (AGBU), a joint institute of NSW Agriculture and the University of New England, and Meat and Livestock Australia Limited (MLA).

## What is an EBV?

An animal's breeding value can be defined as its genetic merit for each trait. While it is not possible to determine an animal's true breeding value, it is possible to estimate it. These estimates of an animal's true breeding value are called EBVs (Estimated Breeding Values).

EBVs are expressed as the difference between an individual animal's genetics and a historical genetic level (i.e. group of animals) within the TACE genetic evaluation, and are reported in the units in which the measurements are taken.

## Using EBVs to Compare the Genetics of Two Animals

TACE EBVs can be used to estimate the expected difference in the genetics of two animals, with the expected difference equating to half the difference in the EBVs of the animals, all other things being equal (e.g. they are joined to the same animal/s).

For example, a bull with a 200 Day Growth EBV of +60 would be expected to produce progeny that are, on average, 10 kg heavier at 200 days of age than a bull with a 200 Day Growth EBV of +40 kg (i.e. 20 kg difference between the sire's EBVs, then halved as the sire only contributes half the genetics).

Or similarly, a bull with an IMF EBV of +3.0 would be expected to produce progeny with on average, 1% more intramuscular fat in a 400 kg carcase than a bull with a IMF EBV of +1.0 (i.e. 2% difference between the sire's EBVs, then halved as the sire only contributes half the genetics).

## Using EBVs to Benchmark an Animal's Genetics with the Breed

EBVs can also be used to benchmark an animal's genetics relative to the genetics of other Angus or Angus infused animals in Australia and New Zealand.

To benchmark an animal's genetics relative to other Angus animals, an animal's EBV can be compared to the EBV reference tables, which provide:

- the breed average EBV
- the percentile bands table

The current breed average EBV is listed on the bottom of each page in this publication, while the current EBV reference tables are included at the end of these introductory notes.

For easy reference, the percentile band in which an animal's EBV ranks is also published in association with the EBV.

## Considering Accuracy

An accuracy value is published with each EBV, and is usually displayed as a percentage value immediately below the EBV.

The accuracy value provides an indication of the reliability of the EBV in estimating the animal's genetics (or true breeding value), and is an indication of the amount of information that has been used in the calculation of the EBV.

EBVs with accuracy values below 50% should be considered as preliminary or of low accuracy, 50-74% as of medium accuracy, 75-90% of medium to high accuracy, and 90% or greater as high accuracy.

## Description of TACE EBVs

EBVs are calculated for a range of traits within TACE, covering calving ease, growth, fertility, maternal performance, carcase merit, feed efficiency and structural soundness. A description of each EBV included in this publication is provided on the following pages.

# UNDERSTANDING ESTIMATED BREEDING VALUES (EBVS)

BIRTH			
<b>Calving Ease Direct</b>	%	Genetic differences in the ability of a sire's calves to be born unassisted from 2 year old heifers.	Higher EBVs indicate fewer calving difficulties in 2 year old heifers.
<b>Calving Ease Daughters</b>	%	Genetic differences in the ability of a sire's daughters to calve unassisted at 2 years of age.	Higher EBVs indicate fewer calving difficulties in 2 year old heifers.
<b>Gestation Length</b>	days	Genetic differences between animals in the length of time from the date of conception to the birth of the calf.	Lower EBVs indicate shorter gestation length.
<b>Birth Weight</b>	kg	Genetic differences between animals in calf weight at birth.	Lower EBVs indicate lighter birth weight.
GROWTH			
<b>200 Day Growth</b>	kg	Genetic differences between animals in live weight at 200 days of age due to genetics for growth.	Higher EBVs indicate heavier live weight.
<b>400 Day Weight</b>	kg	Genetic differences between animals in live weight at 400 days of age.	Higher EBVs indicate heavier live weight.
<b>600 Day Weight</b>	kg	Genetic differences between animals in live weight at 600 days of age.	Higher EBVs indicate heavier live weight.
<b>Mature Cow Weight</b>	kg	Genetic differences between animals in live weight of cows at 5 years of age.	Higher EBVs indicate heavier mature weight.
<b>Milk</b>	kg	Genetic differences between animals in live weight at 200 days of age due to the maternal contribution of its dam.	Higher EBVs indicate heavier live weight.
FERTILITY			
<b>Days to Calving</b>	days	Genetic differences between animals in the time from the start of the joining period (i.e. when the female is introduced to a bull) until subsequent calving.	Lower EBVs indicate shorter time to calving.
<b>Scrotal Size</b>	cm	Genetic differences between animals in scrotal circumference at 400 days of age.	Higher EBVs indicate larger scrotal circumference.
CARCASE			
<b>Carcase Weight</b>	kg	Genetic differences between animals in hot standard carcass weight at 750 days of age.	Higher EBVs indicate heavier carcass weight.
<b>Eye Muscle Area</b>	cm <sup>2</sup>	Genetic differences between animals in eye muscle area at the 12/13th rib site in a 400 kg carcass.	Higher EBVs indicate larger eye muscle area.
<b>Rib Fat</b>	mm	Genetic differences between animals in fat depth at the 12/13th rib site in a 400 kg carcass.	Higher EBVs indicate more fat.
<b>Rump Fat</b>	mm	Genetic differences between animals in fat depth at the P8 rump site in a 400 kg carcass.	Higher EBVs indicate more fat.
<b>Retail Beef Yield</b>	%	Genetic differences between animals in boned out saleable meat from a 400 kg carcass.	Higher EBVs indicate higher yield.
<b>Intramuscular Fat</b>	%	Genetic differences between animals in intramuscular fat (marbling) at the 12/13th rib site in a 400 kg carcass.	Higher EBVs indicate more intramuscular fat.

## FEED EFFICIENCY

<b>Net Feed Intake (Feedlot)</b>	kg/day	Genetic differences between animals in feed intake at a standard weight and rate of weight gain when animals are in a feedlot finishing phase.	Lower EBVs indicate more feed efficiency.
----------------------------------	--------	--	---

## TEMPERAMENT

<b>Docility</b>	%	Genetic differences between animals in temperament.	Higher EBVs indicate better temperament.
-----------------	---	---	--

## STRUCTURE

<b>Front Feet Angle</b>	%	Genetic differences between animals in desirable front feet angle (strength of pastern, depth of heel).	Higher EBVs indicate more desirable structure.
<b>Front Feet Claw Set</b>	%	Genetic differences between animals in desirable front feet claw set structure (shape and evenness of claw).	Higher EBVs indicate more desirable structure.
<b>Rear Feet Angle</b>	%	Genetic differences between animals in desirable rear feet angle (strength of pastern, depth of heel).	Higher EBVs indicate more desirable structure.
<b>Rear Leg Hind View</b>	%	Genetic differences between animals in desirable rear leg structure when viewed from behind.	Higher EBVs indicate more desirable structure.
<b>Rear Leg Side View</b>	%	Genetic differences between animals in desirable rear leg structure when viewed from the side.	Higher EBVs indicate more desirable structure.

## SELECTION INDEXES

<b>Angus Breeding Index</b>	\$	Genetic differences between animals in net profitability per cow joined in a typical commercial self replacing herd using Angus bulls. This selection index is not specific to a particular production system or market end-point, but identifies animals that will improve overall profitability in the majority of commercial grass and grain finishing beef production systems.	Higher selection index values indicate greater profitability.
<b>Domestic Index</b>	\$	Genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting the domestic supermarket trade.	Higher selection index values indicate greater profitability.
<b>Heavy Grain Index</b>	\$	Genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting pasture grown steers with a 200 day feedlot finishing period for the grain fed high quality, highly marbled markets.	Higher selection index values indicate greater profitability.
<b>Heavy Grass Index</b>	\$	Genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting pasture finished steers.	Higher selection index values indicate greater profitability.

## DISCLAIMER AND PRIVACY INFORMATION

### IMPORTANT NOTICES FOR PURCHASERS

**ATTENTION BUYER:** *Animal details included in this catalogue, including but not limited to pedigree, DNA information, Estimated Breeding Values (EBVs) and Index values, are based on information provided by the breeder or owner of the animal. Whilst all reasonable care has been taken to ensure that the information provided in this catalogue was correct at the time of publication, Angus Australia will assume no responsibility for the accuracy or completeness of the information, nor for the outcome (including consequential loss) of any action taken based on this information.*

#### **Parent Verification Suffixes**

The animals listed within this catalogue including its pedigree, are displaying a Parent Verification Suffix which indicates the DNA parent verification status that has been conducted on the animal. The Parent Verification Suffixes that will appear at the end of each animal's name are as follows:

*PV: both parents have been verified by DNA*

*SV: the sire has been verified by DNA*

*DV: the dam has been verified by DNA*

*#: DNA verification has not yet been conducted*

*E: DNA verification has identified that the sire and/or dam may possibly be incorrect, but this cannot be confirmed conclusively.*

#### **Privacy Information**

In order for Angus Australia to process the transfer of a registered animal in this catalogue, the vendor will need to provide certain information to Angus Australia and the buyer consents to the collection and disclosure of that information by Angus Australia in certain circumstances. If the buyer does not wish for his or her information to be stored and disclosed by Angus Australia, the buyer must complete the form included below and forward it to Angus Australia. If the form is not completed, the buyer will be taken to have consented to the disclosure of such information.

#### **BUYERS OPTION TO OPT OUT OF DISCLOSING PERSONAL INFORMATION TO ANGUS AUSTRALIA**

If you do not complete this form, you will be taken to have consented to Angus Australia using your name, address and phone number for the purposes of effecting a change of registration of the animal(s) that you have purchased, maintaining its database and disclosing that information to its members on its website.

*I, the buyer of animals with the following idents.....*

*..... (name) do not consent to Angus Australia using my name, address and phone number for the purposes of effecting a change of registration of the animals I have mentioned above that I have purchased, maintaining its database and disclosing that information to its members on its website.*

*Name: ..... Signature: .....*

*Date: .....*

Please forward this completed consent form to Angus Australia, 86 Glen Innes Road, Armidale NSW 2350.

If you have any questions or queries regarding any of the above, please contact Angus Australia on (02) 6773 4600 or email [office@angusaustralia.com.au](mailto:office@angusaustralia.com.au)
