

ASHBOURNE

SHEEP STUD

White Suffolk and Prime Sann

KATANNING, W.A

**Annual On Property Ram Sale
10th September 2021**

**90 Ashbourne White Suffolk Rams
40 Prime Sann Rams**

 **Nutrien**

Ashbourne Breeding Program

Using LAMBPLAN to make consistent genetic improvement.

The Ashbourne breeding program is centered on a sound combination of genetic principles and practical experience with the aim of breeding modern, profit making sires for commercial lamb production.

We use LAMBPLAN to provide accurate information on the genetic merit of individuals in our flock. In LAMBPLAN, performance and pedigree information is combined to give Australian Sheep Breeding Values. ASBV's are calculated from systematic combinations of performance information on individuals plus their relatives. They are expressed as the difference between an individual's genetic merit and the genetic base to which the animal is compared.

Australian Sheep Breeding Values are provided in this catalogue for SIX main traits:

Birth Weight (BWT): Estimates the genetic difference between animals in liveweight at birth.

Weaning Weight (WWT): Estimates the genetic difference between animals in liveweight at 100 days of age.

Weight (PWWT): Estimates the genetic difference between animals in liveweight at 225 days of age.

Fat (PFAT): Estimates the genetic difference in GR fat depth at 45kg liveweight.

Eye Muscle Depth (PEMD): Estimates the genetic difference in eye muscle depth at the C site in a 45kg liveweight animal.

INDEX's:

TCP (Terminal Carcase Production): Carcase Plus was retired in March 2020 and replaced with this index. The TCP index has the same breeding objectives as Carcase Plus while also maintaining eating quality.

Prime Samms: In relation to the Prime Samms, we weighed the rams on 28th July at the time of muscle scanning to give you a basis for growth compared to flock average, as well as current weights and muscling characteristics. Since time of scanning, most of these rams have put on 10-15kg in liveweight. Wool samples are also taken at shearing time in May.

Prime Samms

The Prime Samm figures were rated against our own ram flock averages listed below.

Scanning Weight Ave	Muscle Av	Fat Av	Micron Av	CF Av
77.3	33.1	4.2	21.8	97.9

Lot No.	Tag Number	Scanning Weight	Eye Muscle	Fat	Micron	Comfort Factor
Example	200000	78.00	33.40	4.4	22.9	99.10
Versus Average		.07	0.3	0.2	1.1	1.2
		Indicates kg above average weight at scanning	+ve is better Higher muscle versus average of flock	+ve is generally better Less fat versus average flock	-ve is better Indicates micron is higher than average flock	+ve is better Indicates comfort factor is higher than average

Accident & Illness

Thank you for your purchase and/or interest in the Ashbourne 2021 Ram Sale.

We would like to thank everybody for your attendance and hope you are happy with the results of your purchase.

Please make sure your Transport Documents are filled out correctly, and Nutrien or Elders have all of your details.

Please help yourselves to a refreshment or two at the conclusion of the sale.

Also, a huge thankyou to everybody who has helped the day be a success, especially the ladies who have organized lunch and afternoon tea etc.
