

Ryegrass

DYNAGRO SEED

Dyna-Dux ANNUAL RYEGRASS

SCIENTIFIC NAME

Lolium multiflorum

FEATURES

- A late season, annual tetraploid ryegrass
- Maintains quality late into the season

MATURITY

- A late flowering variety designed to produce high levels of dry matter in late winter and spring
- Days to flowering relative to Nui (0) = + 19

AREA OF ADAPTION

- Medium to high rainfall environments
- Ideal for grazing, silage & hay

COMPARABLE VARIETIES INCLUDE:

- Adrenalin
- Ascend
- Hogan
- Speedyl
- Zoom

SOIL TYPE

Dyna-Dux is well adapted to a wide range of fertility levels and soil profiles but performs best in a well-drained loam soil.

To maximise stand productivity, soil testing is advisable. Analyse soil and neutralize deficiencies with fertilizer and/or lime.

FERTILITY

Good base rates of phosphorous are necessary for maximum Dry Matter (DM) production especially during the establishment phase. DM production is directly related to nitrogen availability. Consult your agronomist for soil testing and to determine nitrogen application rates.

SOWING

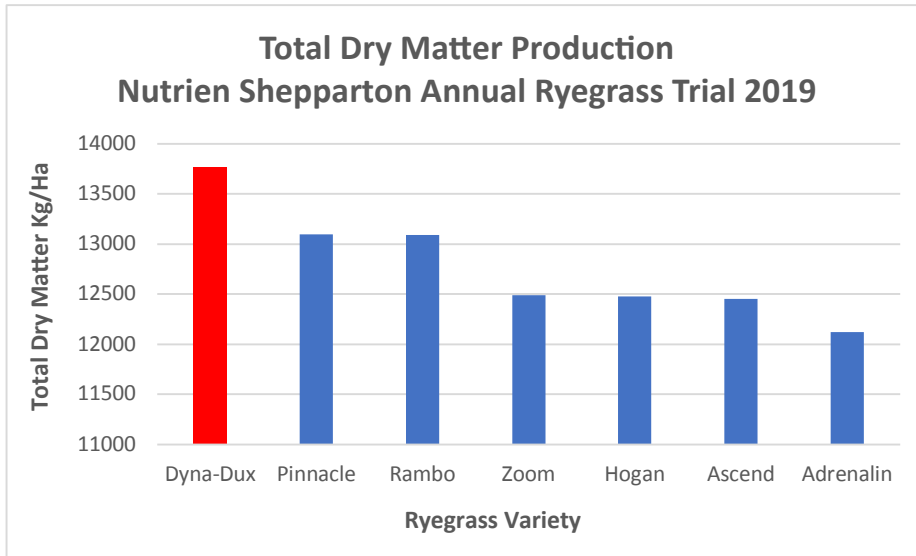

Sow at 20-30kg/Ha alone or 5-15kg/Ha when a component of a pasture. Sow seed no deeper than 1cm into a firm but fine seed bed. Sow into bare ground if direct drilling. Lightly harrow and roll to improve germination. Suitable for oversowing into an established stand.

Note: pasture productivity is directly related to successful plant establishment.
