

Ryegrass

DYNAGRO
SEED

RAMBO
TETRAPLOID ANNUAL RYEGRASS

FEATURES

- A late season, annual tetraploid ryegrass
- Prolific winter growth
- Highly palatable and nutritious
- Vigorous seedling growth
- Characterised by wide leaves and dense tillers

SCIENTIFIC NAME

Lolium multiflorum

MATURITY

A late flowering variety designed to produce dry matter later into the season than Tetila type varieties. Days to flowering relative to Nui (0) = +8

AREA OF ADAPTION

Medium to high rainfall zones
Suitable for irrigation.

COMPARABLE TO

Adrenalin, Arnie, Atomic, Mach1, Winter Star II, Pinnacle.

SOIL TYPE

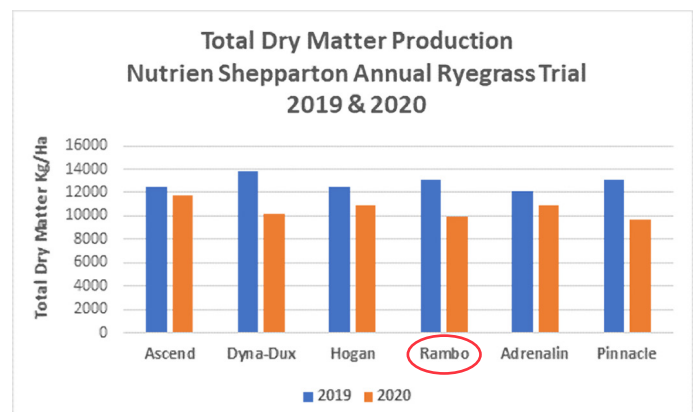

Rambo is well adapted to a wide range of fertility levels and soil profiles, but performs best in a well-drained loam soil. Tetraploid annuals will handle short-term water-logging provided the growing tip is above the water.

FERTILITY

Good base rates of phosphorous are necessary for maximum dry matter production especially during the establishment phase. Dry matter production is directly related to nitrogen availability. Consult your agronomist for nitrogen application rates.

SOWING

Sow at 25-30kg/ha alone or 5-15kg/ha when a component of a pasture blend. Sow seed no deeper than 1cm in a fine but firm seed bed. Sow into bared ground if direct drilling. Lightly harrow and roll to improve germination. Suitable for oversowing into an established stand. Note: Pasture productivity is directly related to successful plant establishment.
