

Ryegrass

DYNAGRO SEED

STAUNCH®

DIPLOID ANNUAL RYEGRASS

SCIENTIFIC NAME

Lolium multiflorum

FEATURES

- An early season, annual diploid ryegrass
- Excellent early Dry Matter production
- High levels of seedling vigour
- Ideal for both hay and silage production

PLANT CHARACTERISTICS

- Fine leaf
- Dense tillering
- Hardy ryegrass option, adaptable to a wide range of environments

MATURITY

An early flowering variety designed to produce higher levels of early Dry Matter.

AREA OF ADAPTION

Low (400mm) to medium rainfall environments.

COMPARABLE TO

Tetila, Winterhawk, Flyer, Grassmax, Tetrone

SOIL TYPE

Staunch is well adapted to a wide range of fertility levels and soil profiles, but performs best in a well-drained loam soil.

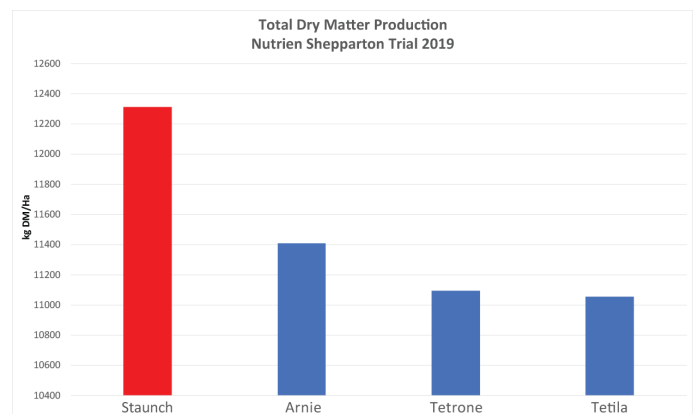

To maximise stand productivity, soil testing is advisable. Analyse soil and neutralize deficiencies with fertilizer and/or lime.

FERTILITY

Good base rates of phosphorous are necessary for maximum Dry Matter (DM) production especially during the establishment phase. DM production is directly related to nitrogen availability. Consult your agronomist for nitrogen application rates.

SOWING

Sow at 15-25kg/Ha alone or 5-15kg/Ha when a component of a pasture blend. Sow seed no deeper than 1cm in a fine but firm seed bed. Sow into bared ground if direct drilling. Lightly harrow and roll to improve germination. Suitable for oversowing into an established stand. Note: pasture productivity is directly related to successful plant establishment.
