Lot 100 - Melaleuca Rambo R92

Lot 101 - Melaleuca Rancher R21

Welcome

*We would like to thank you for your attendance at our on property sale.
Please feel free to contact us at any time if you have any queries.*

Introduction

Melaleuca stud was founded in 1997 following the dissolving of the family partnership that conducted the Springwell Stud. The foundation for the Melaleuca herd comprised of 150 cows from the Springwell herd which originally commenced breeding Murray Greys in 1973.

What a vibrant time to be in the beef industry! In particular, the cow/calf producer is reaping the rewards of sticking with the industry. Murray Greys continue to be in demand both by processors and commercial cow/calf operations due to their ability to perform as purebreds and enhance other breeds as crossbreds. We expect the demand to continue.

This years offering of bulls have come through a very wet and cold Manypeaks winter to really blossom in the cool, soft spring. They are particularly well muscled while still displaying the softness required for breeding females. Overall, we think they are our best and most even draft we've produced.

This year we are excited to be offering six lots sired by our impact sire, Melaleuca Mission M64. As a rising six-year-old, M64 possesses a phenomenal presence, sound feet, a lovely disposition and consistently produces progeny boasting explosive 200-day growth. He is a magnificent example of a modern Murray Grey bull and is having a big impact on our herd with a significant number of daughters retained. Lot 101 and 102 are elite silver M64 sons who could easily be used in a stud role but would also make terrific herd improving commercial sires. He has another four well fleshed grey sons who will grow into impressive sires.

Woodbourn Kernel K78 and his son Melaleuca Pegasus P8 is the dominant bloodline in this year's catalogue. The sons of these sires are a very consistent group with a variety of maturity patterns. They are typically soft, well fleshed, medium framed bulls with great feet. Woodbourn Kernel K78 sons can be used anywhere in your program and will produce great supermarket steers. Newcomer, Pegasus P8, looks like he is going to be a major contributor to our herd into the future. Our lead off bull, Lot 100, is the first P8 son to be offered and is a great example of the extra growth typical of his progeny.

The bulls will again be catalogued on AuctionsPlus and will be on display at our Field Day on Friday 11th February 2022. Presale inspection can be arranged individually by appointment.

AuctionsPlus

Buy and Sell stock nationally

Husbandry

No Melaleuca animals have been hoof trimmed and the herd is annually pregnancy tested. All bulls were given All-Trace Trace Element Boluses at weaning.

Vaccinations

As part of our ongoing health program, this year all of our bulls have been vaccinated to prevent Infectious Bovine Rhinotracheitis (IBR). IBR is the most common clinical syndrome associated with Bovine Herpesvirus-1 (BHV-1) infection in Australian cattle herd.

All calves are vaccinated with 7:1 at calf marking and booster vaccination.

All bulls have been vaccinated for Vibriosis and booster vaccination.

All bulls have been vaccinated for Pestivirus and booster vaccination.

All bulls have been vaccinated with Piliguard for Pink Eye.

All bulls were Pestivirus tested negative.

Semen Tested

All bulls were Semen Tested by Nutrien Breeding Services and were guaranteed fit for service on the 21st October 2021.

Johne's Beef Association Score

Melaleuca Murray Greys are a JBAS 6 herd.

Inspection

Bulls will be penned by 10am on the day of the sale for inspection, or prior by arrangement.

We will also be conducting a Field Day on Friday 11th February between 1pm & 5pm. The bulls will be penned for your viewing.

Refreshments

A Luncheon and Refreshments will be available on sale day.

Auction

All bulls will be sold under the Nutrien Conditions of Auction Sales.

The Auction price will be GST exclusive.

Insurance

We recommend that Bulls are insured. We use and recommend Darrell Panizza at Wesfarmers Federation Insurance. Darrell will be available on sale day or he can be contacted on Mobile: 0427 429 496 Office: (08) 9842 7897.

Delivery

Bulls will not be available for delivery on sale day.

We will deliver all bulls personally to properties within 1000km of Manypeaks and provide \$500 freight assistance to Eastern States purchasers.

Bulls will be delivered using a semi trailer.

Please advise if your yards are not accessible by a semi trailer.

Guarantee

All bulls offered are guaranteed to be fertile and capable of natural service at the date of the sale, and for a period of six months there-after. No warranty is given for any bull who becomes infertile or incapable of natural service due to injury or disease. The vendor retains the right to obtain veterinary confirmation of any claim. As an added assurance for purchasers, the vendor is prepared to offer a separate comprehensive guarantee for any bull who becomes incapable of natural service due to the development of Premature Spiral Deviation of the Penis (PSDP). This is a condition that can occur in all breeds and is not fully understood. Its occurrence may be genetic, or environmental, or a mixture of both. If such a claim is substantiated by a veterinary declaration within the first year of service a refund of the full purchase price less the meat value of the bull will be issued.

ESTIMATED BREEDING VALUES (EBVs)

An animal's breeding value is its genetic merit, half of which will be passed on to its progeny. While we will never know the exact breeding value, for performance traits it is possible to make good estimates. These are called Estimated Breeding Values (EBVs). The EBV is therefore the best estimate of an animal's genetic merit for that trait. EBVs are expressed as the difference between an individual animal's genetics and the genetic base to which the animal is compared.

ACCURACY

An accuracy value is presented with every EBV and gives an indication of the amount of information that has been used in the calculation of that EBV. The higher the accuracy, the lower the likelihood of change in the animal's EBV as more information is analysed for that animal or its relatives.

Accuracy Range	Interpretation
LESS THAN 50%	Low accuracy and should be considered a preliminary estimate. The EBV could change substantially as more performance information becomes available.
50 - 74%	Medium accuracy, usually based on the animal's own records and pedigree.
75 - 90%	Medium-high accuracy and usually includes some progeny information. Becoming a more reliable indicator of the animal's value as a parent.
90% and above	High accuracy. It is unlikely that the EBV will change much with the addition of more progeny data.

CALVING EASE

Calving Ease EBVs are based on birth difficulty scores, birth weights and gestation length information. More positive EBVs are favourable and indicate easier calving.

Calving Ease Direct indicates how this animal influences the birth of its progeny.

Calving Ease Daughters indicates how well the animal produces daughters that have easier calving.

BIRTH

Gestation Length EBV (days) is based on AI records. Lower (negative) GL EBVs indicate easier calving and increased growth after birth.

Birth Weight EBV (kg) is based on the measured birth weight of animals, adjusted for dam age. The lower the value the lighter the calf at birth and the lower the likelihood of a difficult birth. This is particularly important when selecting sires for use over heifers.

FERTILITY

Scrotal Size EBV (cm) is an indicator of male fertility in regards to semen quality and quantity. Higher (positive) EBVs indicate higher fertility. SS is also positively associated with female fertility.

Days to Calving EBV (days) is an indicator of female fertility based on the time between the cow's first exposure to a bull and when she subsequently calves. Cows that calve late in the season or fail to calve are penalised. This is more useful as a sire trait. Lower (negative) EBVs are preferred indicating shorter days to calving for the sire's daughters.

GROWTH

200-Day Milk EBV (kg) is an estimate of an animal's milking ability. For sires, this EBV is indicative of their daughter's milking ability as it affects the 200-day weight of their calves.

200-Day Growth EBV (kg) is calculated from the weight of animals taken between 80 and 300 days of age. Values are adjusted to 200 days and for dam age. This EBV is the best single estimate of an animal's genetic merit for growth to early ages.

400-Day Weight EBV (kg) is calculated from the weight of progeny taken between 301 and 500 days of age, adjusted to 400 days and for dam age. This EBV is the best single estimate of an animal's genetic merit for yearling weight.

600-Day Weight EBV (kg) is calculated from the weight of progeny taken between 501 and 900 days of age, adjusted to 600 days and for dam age. This EBV is the best single estimate of an animal's genetic merit for growth beyond yearling age.

Mature Cow Weight EBV (kg) is an estimate of the genetic difference in cow weight at 5 years of age. Smaller, or more moderate EBVs are generally more favourable.

CARCASE

Carcase Weight EBV (kg) estimates the genetic difference in carcass weight at a standard age of 650 days.

Eye Muscle Area EBV (cm²) estimates genetic differences in eye muscle area at the 12/13th rib site of a 300kg dressed carcass. More positive EBVs indicate better muscling on animals.

Rib Fat EBV (mm) estimates the genetic differences in fat depth at the 12/13th rib in a 300kg dressed carcass. More positive EBVs indicate more subcutaneous fat and earlier maturity.

Rump Fat EBV (mm) estimates the genetic differences in fat depth at the P8 site of a 300kg dressed carcass. More positive EBVs indicate more subcutaneous fat and earlier maturity.

Retail Beef Yield Percent EBV (%) represents total (boned out) meat yield as a percentage of a 300kg dressed carcass. A more positive EBV indicates higher percentage yield for the 300kg carcass size.

Intra-muscular Fat Percent EBV (%) is an estimate of the genetic difference in the percentage of intra-muscular fat at the 12/13th rib site in a 300kg carcase. Depending on market targets, larger more positive values are generally more favourable.

SELECTION INDICES

Vealer Terminal Index: Estimates the genetic differences between animals in net profitability per cow joint for an example crossbred commercial herd (ie. using Murray Grey bulls over British bred females) targeting vealer production. Vealers are finished on grass and marketed at 365kg live weight (average 200kg HSCW and 9mm P8 fat depth) at 10 months of age. Daughters are NOT retained for breeding and so no consideration is given to maternal traits (ie. calving ease daughters, female fertility, mature cow weight).

Supermarket Index: Estimates the genetic differences between animals in net profitability per cow joined for an example Murray Grey commercial herd targeting production of steers for the domestic supermarket trade. Steers are either finished on grass, or grain fed for 70 days, and marketed at 470kg live weight (average 260kg HSCW and 12mm fat) at 15 months of age. Daughters are retained for breeding.

EU Heavy Steer Index: Estimates the genetic differences between animals in net profitability per cow joined for an example Murray Grey commercial herd targeting pasture finished steers for heavier grass fed markets such as the EU & Korean market. Steers are assumed marketed at 620kg live weight (340kg HSCW and 14mm P8 fat depth) at 24 months of age. Daughters are retained for breeding.

Average GROUP EBVs for the 2019 drop calves analysed in the 2020 Summer Murray Grey GROUP BREEDPLAN

Buyer's Signature:

Special notice to buyers

In the interest of buyers and to prevent the occurrence of mistakes, all instructions concerning delivery of the cattle must be given in writing and signed by the buyer or his representative. No verbal instructions can be accepted.

Bulls will be delivered using a semi trailer. Please advise if your yards are not accessible by a semi trailer.

Insurance Disclaimer

Insurance risk of stud animals sold at auction transfers to the purchaser at the fall of the hammer, including animals remaining on the vendor's property. Purchasers therefore are advised to insure their animals at the completion of the sale. Stud animals are not covered by commercial livestock insurance.
