 Chale Angus and Enfield Red Angus

CONDUCTING AGENTS

Studstock	Jock Gibson	0418 133 595
	Cooper Lamprey	0429 304 110
North	David Bennett	0439 632 374
	Warren Johnson	0419 326 348
Northeast	Cabel Hall	0418 134 448
Flinders Island	Scott Wood	0429 440 400

This sale is to be interfaced with AuctionsPlus

The sale is conducted live on line in real-time, and will be interfaced on AuctionsPlus with the physical helmsman auction. Remote bidders can bid on computers at their location and the bid is immediately transferred to the sale venue.

On-line bidding is only available to Registered AuctionsPlus Users. To bid you must register on-line with AuctionsPlus at least 48 hours prior to the sale.

WELCOME TO 2022 BULL SALE

What an amazing year it has been. We thought Covid would be over with by now, but still it persists. Face masks and distances have become the new norm. Cattle prices continue to amaze us all and I'm sure with that extra money in the bank, many farms will have had some long-awaited upgrades of either infrastructure, equipment or livestock. Here it's been fencing!

The spring was good and the forecast was for a good summer with ongoing rains. Unfortunately, the rain has been very patchy and here at 'Enfield' I'm a bit over the travelling irrigator!

When I've been selecting AI sires over the last few years, I've been looking for sires with moderate birth weight but still with good growth and carcass figures. Obviously being here on my own, calving ease and temperament are also high on my checklist.

Sires represented in the sale catalogue include Baldrige Beast Mode B074, a trait leader for 200, 400, 600 Day Weights and Selection Indexes. He stamps a 'type' on his calves with thickness right through. The Dulverton New Approach N208 progeny just keep improving and as he is such a good allrounder I've used him again in last year's AI programme. Landfall Keystone and Murdeduke Kicking both bring a great spread of figures from BW to 600 Day.

The sires of the natural bred bulls include Ardrossan Drifter N31. This sire was a really deep, wide bodied bull with massive thickness and an outcross pedigree. The second line of Booroomooka Kingy M140 progeny are in the catalogue and look like they will grow out to be like their sire – long, upstanding with good growth and carcass data. The Karoo Docklands sons catalogued will be the last of his progeny. K194 was extremely sound footed and passed his calving ease and low birth weight onto his progeny.

The Enfield Red Angus bulls are mostly by Yallabee Powe Force M54. Sadly, with only a small Red Angus herd I can't keep the herd bulls here for long, but I would happily have kept this bull if circumstances had allowed. M54 was a long, extremely thick bull with substance and I loved his temperament.

Don't forget that Red Angus EBVs can only be compared to other Red Angus Herds and not to other breeds such as Angus.

I look forward to catching up with everyone at the sale.

Regards Josie

SALE DETAILS

LOCATION: 'Enfield' is 3.2kms from Bishopsbourne and 33kms from Launceston. See location map.

SALE: Helmsman sale to be held under cover (interfaced with AuctionsPlus). A complementary morning tea and luncheon will be provided as a thank you for attending our sale. Join us for a drink after the sale.

HEALTH & SAFETY: Visitors enter the cattle pens at their own risk. Children must NOT enter the yards. Covid restrictions will apply. Please sign in as you enter and be aware of social distancing.

BIDDING / BUYER NUMBER SYSTEM: A bidding / buyer number system will be used. Please register with the Agents on sale day.

INSPECTION: All bulls may be inspected at "Enfield", Bishopsbourne on Sunday 20th March 10am to 1pm (or any day prior to the sale by appointment).

SUPPLEMENTARY SHEETS: Supplementary sheets will be available at inspection and sale days. Raw scan and weight data is available if required.

REBATE: 4% rebate commission offered to outside agents introducing buyers to the vendor in writing 24 hours prior to the sale, accompanying buyers to the sale and settling for same within 7 days on invoice.

ANIMAL HEALTH: All sale bulls have been semen tested, vaccinated twice with 7in1, Pestigard and Vibrovax and have been ear notch tested for Pestivirus PI status. All cattle are sold subject to passing any necessary health tests for other States. Tasmania is free from Brucellosis and Tuberculosis. Herds are J-BAS 6. All Angus bulls will have been Sire Verified with Angus Australia.

INSURANCE: At the completion of the helmsman sale, the buyer is immediately responsible for the stock purchased. Please insure your purchase at the completion of the sale. It is requested that all animals remaining on property after the conclusion of the sale be insured. We strongly recommend that transit insurance be taken out on all bulls.

FREIGHT: Free Sea Freight to King and Flinders Islands and to the mainland for bulls sold at sale. We will happily organise delivery of all other bulls at the earliest convenience with transit insurance being the responsibility of the purchaser.

DELIVERY: It is requested that there be no deliveries on sale day.

DISCLAIMER: Animal details included in this catalogue, including but not limited to pedigree, DNA information, Estimated Breeding Values (EBVs) and Index values, are based on information provided by the breeder or owner of the animal. Whilst all reasonable care has been taken to ensure that the information provided in this catalogue was correct at the time of publication, Angus Australia will assume no responsibility for the accuracy or completeness of the information, nor for the outcome (including consequential loss) of any action taken based on this information.

The suffix displayed at the end of each animal's name indicates the DNA parentage verification that has been conducted by Angus Australia.

PV : both parents have been verified by DNA.

SV : the sire has been verified by DNA.

DV : the dam has been verified by DNA.

: DNA verification has not been conducted.

E : DNA verification has identified that the sire and/or dam may possibly be incorrect, but this cannot be confirmed conclusively.

OPEN DAY

SUNDAY 20th MARCH

10am to 1pm

UNDERSTANDING THE TRANSTASMAN ANGUS CATTLE EVALUATION (TACE)

What is the TransTasman Angus Cattle Evaluation?

The TransTasman Angus Cattle Evaluation is the genetic evaluation program adopted by Angus Australia for Angus and Angus influenced beef cattle. The TransTasman Angus Cattle Evaluation uses Best Linear Unbiased Prediction (BLUP) technology to produce Estimated Breeding Values (EBVs) of recorded cattle for a range of important production traits (e.g. weight, carcass, fertility).

The TransTasman Angus Cattle Evaluation is an international genetic evaluation and includes pedigree, performance and genomic information from the Angus Australia and Angus New Zealand databases, along with selected information from the American and Canadian Angus Associations.

The TransTasman Angus Cattle Evaluation utilises a range of genetic evaluation software, including the internationally recognised BLUPF90 family of programs, and BREEDPLAN® beef genetic evaluation analytical software, as developed by the Animal Genetics and Breeding Unit (AGBU), a joint institute of NSW Agriculture and the University of New England, and Meat and Livestock Australia Limited (MLA).

What is an EBV?

An animal's breeding value can be defined as its genetic merit for each trait. While it is not possible to determine an animal's true breeding value, it is possible to estimate it. These estimates of an animal's true breeding value are called EBVs (Estimated Breeding Values).

EBVs are expressed as the difference between an individual animal's genetics and a historical genetic level (i.e. group of animals) within the TACE genetic evaluation, and are reported in the units in which the measurements are taken.

Using EBVs to Compare the Genetics of Two Animals

TACE EBVs can be used to estimate the expected difference in the genetics of two animals, with the expected difference equating to half the difference in the EBVs of the animals, all other things being equal (e.g. they are joined to the same animal/s).

For example, a bull with a 200 Day Growth EBV of +60 would be expected to produce progeny that are, on average, 10 kg heavier at 200 days of age than a bull with a 200 Day Growth EBV of +40 (i.e. 20 kg difference between the sire's EBVs, then halved as the sire only contributes half the genetics).

Or similarly, a bull with an IMF EBV of +3.0 would be expected to produce progeny with on average, 1% more intramuscular fat in a 400 kg carcass than a bull with an IMF EBV of +1.0 (i.e. 2% difference between the sire's EBVs, then halved as the sire only contributes half the genetics).

Using EBVs to Benchmark an Animal's Genetics with the Breed

EBVs can also be used to benchmark an animal's genetics relative to the genetics of other Angus or Angus infused animals recorded with Angus Australia.

To benchmark an animal's genetics relative to other Angus animals, an animal's EBV can be compared to the EBV reference tables, which provide:

- the breed average EBV
- the percentile bands table

The current breed average EBV is listed on the bottom of each page in this publication, while the current EBV reference tables are included at the end of these introductory notes. For easy reference, the percentile band in which an animal's EBV ranks is also published in association with the EBV.

Considering Accuracy

An accuracy value is published with each EBV, and is usually displayed as a percentage value immediately below the EBV.

The accuracy value provides an indication of the reliability of the EBV in estimating the animal's genetics (or true breeding value), and is an indication of the amount of information that has been used in the calculation of the EBV.

EBVs with accuracy values below 50% should be considered as preliminary or of low accuracy, 50-74% as of medium accuracy, 75-90% of medium to high accuracy, and 90% or greater as high accuracy.

Description of TACE EBVs

EBVs are calculated for a range of traits within TACE, covering calving ease, growth, fertility, maternal performance, carcass merit, feed efficiency and structural soundness. A description of each EBV included in this publication is provided on the following page.

UNDERSTANDING ESTIMATED BREEDING VALUES (EBVS)

Calving Ease	CEDir	%	Genetic differences in the ability of a sire's calves to be born unassisted from 2 year old heifers.	Higher EBVs indicate fewer calving difficulties in 2 year old heifers.
	CEDtrs	%	Genetic differences in the ability of a sire's daughters to calve unassisted at 2 years of age.	Higher EBVs indicate fewer calving difficulties in 2 year old heifers.
	GL	days	Genetic differences between animals in the length of time from the date of conception to the birth of the calf.	Lower EBVs indicate shorter gestation length.
	BW	kg	Genetic differences between animals in calf weight at birth.	Lower EBVs indicate lighter birth weight.
Growth	200 Day	kg	Genetic differences between animals in live weight at 200 days of age due to genetics for growth.	Higher EBVs indicate heavier live weight.
	400 Day	kg	Genetic differences between animals in live weight at 400 days of age.	Higher EBVs indicate heavier live weight.
	600 Day	kg	Genetic differences between animals in live weight at 600 days of age.	Higher EBVs indicate heavier live weight.
	MCW	kg	Genetic differences between animals in live weight of cows at 5 years of age.	Higher EBVs indicate heavier mature weight.
	Milk	kg	Genetic differences between animals in live weight at 200 days of age due to the maternal contribution of its dam.	Higher EBVs indicate heavier live weight.
Fertility	DtC	days	Genetic differences between animals in the time from the start of the joining period (i.e. when the female is introduced to a bull) until subsequent calving.	Lower EBVs indicate shorter time to calving.
	SS	cm	Genetic differences between animals in scrotal circumference at 400 days of age.	Higher EBVs indicate larger scrotal circumference.
Carcase	CWT	kg	Genetic differences between animals in hot standard carcass weight at 750 days of age.	Higher EBVs indicate heavier carcass weight.
	EMA	cm ²	Genetic differences between animals in eye muscle area at the 12/13th rib site in a 400 kg carcass.	Higher EBVs indicate larger eye muscle area.
	Rib Fat	mm	Genetic differences between animals in fat depth at the 12/13th rib site in a 400 kg carcass.	Higher EBVs indicate more fat.
	P8 Fat	mm	Genetic differences between animals in fat depth at the P8 rump site in a 400 kg carcass.	Higher EBVs indicate more fat.
	RBV	%	Genetic differences between animals in boned out saleable meat from a 400 kg carcass.	Higher EBVs indicate higher yield.
	IMF	%	Genetic differences between animals in intramuscular fat (marbling) at the 12/13th rib site in a 400 kg carcass.	Higher EBVs indicate more intramuscular fat.
Feed/Temp.	NFI-F	kg/day	Genetic differences between animals in feed intake at a standard weight and rate of weight gain when animals are in a feedlot finishing phase.	Lower EBVs indicate more feed efficiency.
	Doc	%	Genetic differences between animals in temperament.	Higher EBVs indicate better temperament.
Structure	Foot Angle	score	Genetic differences in foot angle (strength of pastern, depth of heel).	Lower EBVs indicate more desirable foot angle.
	Claw Set	score	Genetic differences in claw set structure (shape and evenness of claws).	Lower EBVs indicate more desirable claw structure.
Selection Index	\$A	\$	Genetic differences between animals in net profitability per cow joined in a typical commercial self replacing herd using Angus bulls. This selection index is not specific to a particular market end-point, but identifies animals that will improve overall net profitability in the majority of commercial, self replacing, grass and grain finishing beef production systems.	Higher selection indexes indicate greater profitability.
	\$A-L	\$	Genetic differences between animals in net profitability per cow joined in a typical commercial self replacing herd using Angus bulls. This selection index is not specific to a particular market end-point, but identifies animals that will improve overall net profitability in the majority of commercial, self replacing, grass and grain finishing beef production systems. The \$A-L index is similar to the \$A index but is modelled on a production system where feed is surplus to requirements for the majority of the year, or the cost of supplying additional feed when animal feed requirements increase is low. While the \$A aims to maintain mature cow weight, the \$A-L does not aim to limit the increase in mature cow weight as there is minimal cost incurred if the feed maintenance requirements of the female breeding herd increase as a result of selection decisions.	Higher selection indexes indicate greater profitability.

NOTES
