# Welcome to Milwillah in 2022

Today a larger breeder herd than ever before is managed by the Milwillah team internally. An unwavering commercial focus is a necessity for survival.

Externally Milwillah bulls will this year cover a combined herd of over 350,000 cows and heifers in the majority of Australian states and territories, across a multitude of different climatic conditions and land types.

The values of structural soundness, fertility and softness, or more broadly emphasising constitution in the Milwillah cattle is extremely important to the fulfilment of the Milwillah vision and the longevity of the operation.

The Milwillah team go to extra measures to ensure we continue to improve in all of these aspects.

In any one year between 60-80% of sale bulls presented for your viewing will be used as yearling sires throughout the programs operating on-farm at Milwillah.

Yearling bulls are trucked to 3-4 different locations throughout NSW and Southern Qld and joined in mobs of 20-30 depending on female numbers at any one location. We find this a way to prove these young sires and ensure they are ready for your viewing and potential purchase. Any under-performers, or structural discrepancies are highlighted at a young age and dealt with accordingly, which usually means - Not sold for breeding purposes.

The heavy use of yearling bulls at Milwillah has been beneficial for the operation as a whole from both the bull entity perspective for our clients, and the retained female perspective internally. This model ensures each year the entire herd is exposed to new or improved genetics. A number of young bulls used are also bred from first calving heifers, meaning genetic progression is again magnified over the entire operation. This progression and intense scrutiny in a female battery that supplies genetics from operations ranging from 10 head, to some of the largest Northern Australia pastoral supply chains is necessary to ensure the Angus breed continue to positively impact the entire Australian beef industry.

The benefits of being a largely closed herd for an extended period and undertaking what we perceive as "usual" practice over this period we see as another factor that is improving performance of cattle that are faced with intense scrutiny through adversity in marginal areas. A continued emphasis

on the importance of selecting sire-lines from similar or aligned herds with emphasis on what we refer to as "pedigree and practice" alignment ensures the hard work of previous generations isn't diluted, but progressed.

Throughout the sales preparation a lot of time and care is taken in the structural assessment process. Within the Angus bull assessment that took place from July 9-10 2022 only 4 bulls were scored a 7 on claw-set over a sample of 230 bulls. The rest were scored a 6 or better, this is a number that the team at Milwillah is very proud of.

## **The 2022 sale team includes:**

- More bulls sold at auction.
- More bulls proved as a yearling.
- More bulls suitable for heifer joining.
- More bulls with straight 5's on feet.
- More age groups.
- More softness.
- Rising 2 year olds included  
( Lots 1-Lot 5, Lot 8-Lot 46, Lot 54-Lot 80, Lot 98-Lot 117, Lot 129-Lot 134)
- 15 month olds included ( Lots 81- Lot 97)
- 17 month olds included  
(Lot 6-Lot 7 and included in Lots 118-Lot 121)
- Yearlings included  
( Lot 47-Lot 53 and Lot 122-Lot 129)

## **The offering includes:**

- S.PowerPoint Sons and Grandsons by M.PowerPoint Q1 and M.Powerbroker Q11.
- M.Moonshine M131 sons.
- K.Identity grandsons by M.Padua P108, M.Prairie P729, M.Identity P7, P127 And P134.
- T.Jaal Sons and Grandsons by M.Jaal P295 and Jaal P3.
- Sons of M.Krakatoa N426.
- Sons of M.Napa N498.
- Sons of M.Nardoo N155.
- Sons of T.Pheasantry P1479.

## **Best Wishes**

**Will Caldwell and the Milwillah Team**

# Sale Details

## Milwillah Angus Annual On-Property Bull Sale Friday 2nd September 2022 - Sale starts 1:00pm 130 Registered Angus Bulls

### LOCATION (map inside back cover)

Milwillah Sale Complex is located at "Clover Hill" cattle yards, Berthong Road, approximately 21km from Young, 60km from Temora and 40km from Cootamundra.

If coming from Young, drive out of town on the Temora Road for 20km. Here there will be a left turn onto the Berthong Road and "Clover Hill" yards are located at the top of the hill on the right 1km from the turn off.

### CATERING

Refreshments and lunch will be provided by Milwillah on sale day.

### REBATES

A 2.5% rebate will be offered to all outside agents who introduce the client in writing to the vendor at email angus@milwillah.com.au 24 hours prior to the sale and who settle within 7 days of the sale date.

### ELITE LIVESTOCK AUCTIONS

Milwillah Bull Sale will be interfaced with Elite Livestock Auctions, this will include live streaming of the entire sale. Elite Livestock Auctions is an alternate bidding option if you can't attend the sale in person. However, it is only available to registered users. We recommend registering online at least 24 hours prior to the sale.

### MOBILE PHONE SERVICE

Milwillah Sale Complex has acceptable mobile phone service.

### GST

Bulls will be sold GST exclusive ie, if the bull is knocked down for \$3000, you will be charged \$3300.

### BULL HEALTH

Bovine Johnes Disease – Milwillah is located in a Protected zone meaning it is completely Johnes Free. All bulls have been treated with 7 in 1, Vibrio Vax and Pestiguard in 9-12 July 2022.

### SEmen/MORPHOLOGY

On 9-12th of July 2022 semen was taken by electroejaculation from the sale bulls.

All bulls passed the minimum standard for concentration, motility, progressive motility and gross morphology.

All bulls achieved normal erections with no evidence of injury. On palpation testes were found to be of adequate size and normal consistency.

### ON FARM SEMEN RIGHT

Milwillah reserves the right to collect semen for on-farm use only, from all bulls catalogued at the 2022 auction. This can be undertaken at a time that is convenient for the purchaser as well as being done on farm at minimum risk to the bull.

Expense will be covered by Milwillah.

### GENETIC CONDITIONS

We've tested all sale bulls for AM, NH, CA & DD prior to the sale. All non carriers are either AMF, NHF, CAF & DDF (tested free of the gene) or AMFU, NHFU, CAFU & DDFU (pedigree free of the gene).

If by chance, there is still a % remaining on any sale lots due to unforeseen circumstances. Milwillah will guarantee the animal until completion of testing at the cost to Milwillah if requested by the purchaser.

### OBSERVED TRAITS

Due to the relatively likeness of information notably actual foot-score information of the 2022 sale team submitted for TACE analysis, a small number of bulls aren't showing a foot-score observed trait; we can confirm that we take a lot pride in getting all data recorded on each animal and submitted to TACE to ensure correct decisions are made by all clients at auction time. Below is what was returned post submission of foot-score data.

*"There needs to be some variation in scores for them to be used in the TACE analysys. Scoring all animals in a group with a score of (5) does not identify any differences in structural soundness between animals, and consequently, does not provide any useful information for the calculation of Structural Soundness EBVs."*

### INSURANCE

There is no Vendor Insurance on Sale Bulls. It will be the responsibility of the purchasers to insure their bulls.

### GUARANTEE

All bulls have passed a thorough fertility and structural soundness examination conducted by Ian Moreland of Studcare Genetics.

To the best of our knowledge, all bulls are in sound working condition at the time of sale.

In the unlikely event of a bull proving to be infertile or incapable of natural service during the next 12 months from purchase, provided the problem is not caused by injury or disease contracted since taking delivery,

Milwillah will:

- Offer to supply a suitable replacement if available.

Any claim must be accompanied by a relevant veterinary certificate.

## TRANSPORT

Milwillah Angus will provide all purchasers from Northern NSW and Qld a free freight service from Young, NSW to Goondiwindi, Qld via Dubbo. Onward freight arrangements beyond Goondiwindi or from Dubbo and any other intermediate points will be the purchaser's responsibility.

Milwillah Angus will provide all purchasers from Victoria a free freight service direct to Albury-Wodonga, beyond this destination will be the purchaser's responsibility.

## CARRIER

Milwillah Angus recommends Dick Smith Transport of Dubbo. They have been invited to attend the sale to

help co-ordinate the delivery of stock.

Dick Smith Transport

Ph: 0268 822 463 or 0428 636 236

## OCCUPATIONAL HEALTH & SAFETY

All persons entering bull pens and cattle yards at Milwillah Sale Complex must do so at own risk.

Please, NO children allowed in bull pens and cattle yards at Milwillah Sale Complex.

## SALE LOT VIDEOS

Lot videos will be attempted for 2022 sale bulls, I feel, with the wet conditions that bulls may not present as well with heavy, muddy conditions playing havoc so far in the 2022 campaign.

I encourage everyone if videos are required of individual bulls to please ring Will on 0427 481 566, to discuss bulls and seek further footage if required.

## Things will continue to be a bit different at the Milwillah sale this year...

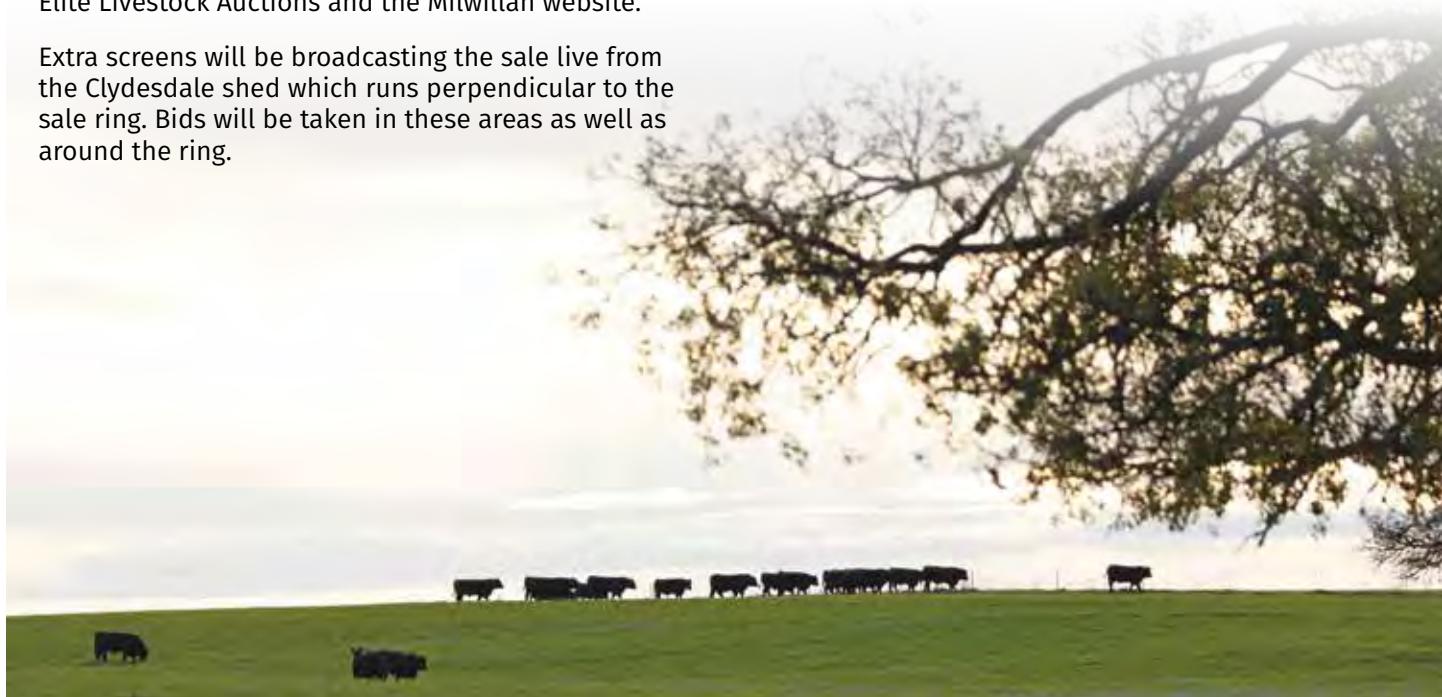

Under NSW Health guidelines, we ask that all our customers use the hand sanitiser provided prior to entry. We also ask that everyone abides by the social distancing regulations provided and keep 1.5m from all other persons.

All bulls are videoed and available for viewing on Elite Livestock Auctions and the Milwillah website.

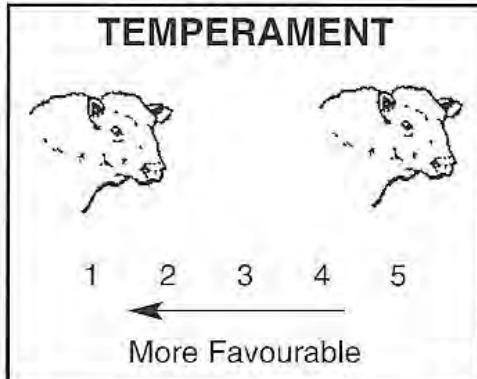

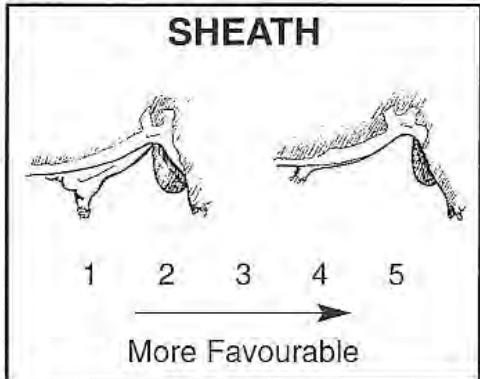

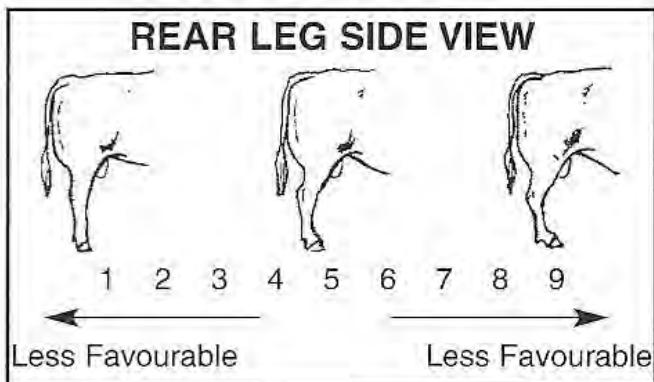

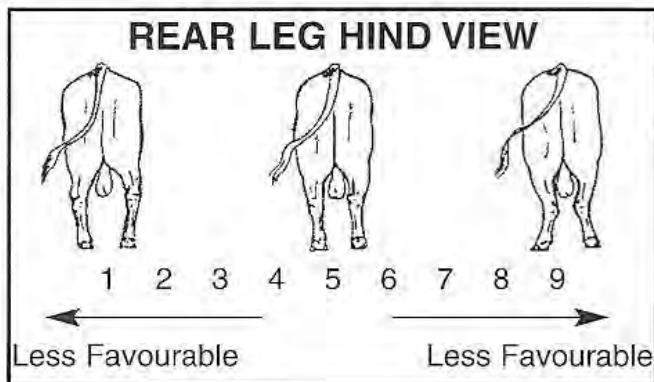

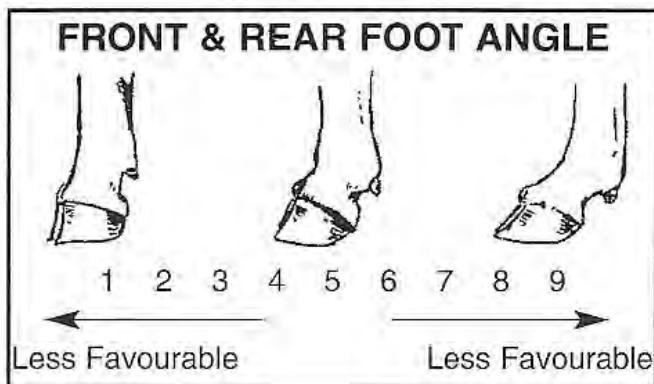

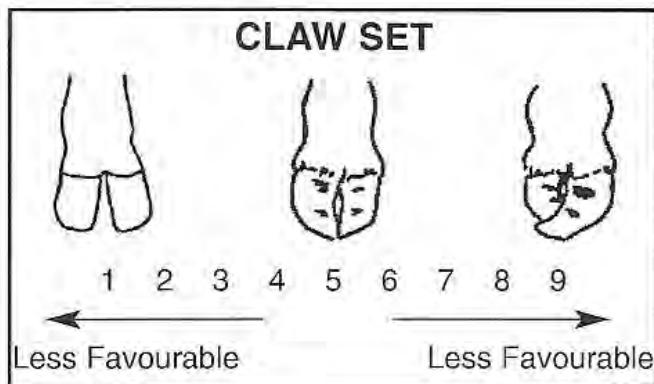

Extra screens will be broadcasting the sale live from the Clydesdale shed which runs perpendicular to the sale ring. Bids will be taken in these areas as well as around the ring.

For further information or any questions regarding restricted travel presale or sale day, please feel free to ring Will directly on 0427481566.

Rest assured we are doing everything we can to ensure a safe environment under the current circumstances.

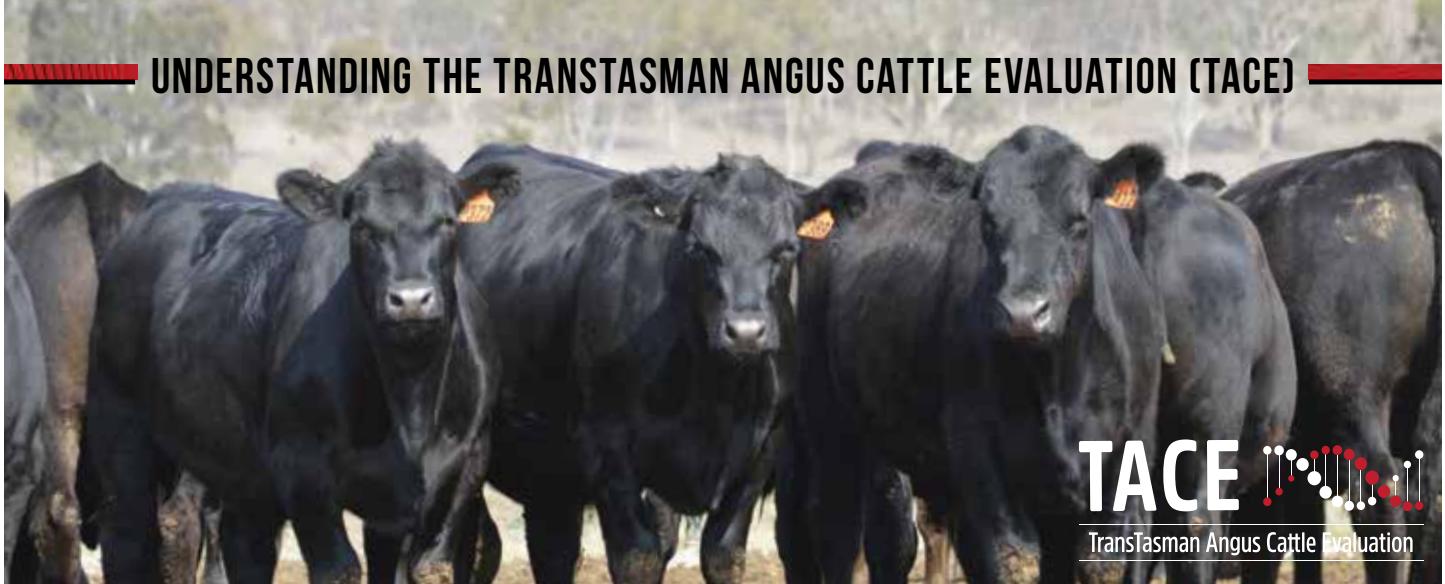

# HOW TO USE THE BEEF CLASS STRUCTURAL ASSESSMENT SYSTEM

**The Beef Class Structural Assessment System uses a 1-9 scoring system;**

- A score of 5 is ideal. (Note: Temperament Score of 1 is preferable)
- A score of 4 or 6 shows slight variation from ideal, but this includes most animals. An animal scoring 4 or 6 would be acceptable in any breeding program.
- A score of 3 or 7 shows greater variation but would be acceptable in most commercial programs. However, seedstock producers should be vigilant and understand that this score indicates greater variation from ideal.
- A score of 2 or 8 are low scoring animals and should be looked closely before purchasing.
- A score of 1 or 9 should not be catalogued and are considered culs.

# UNDERSTANDING THE TRANSTASMAN ANGUS CATTLE EVALUATION (TACE)

**TACE**

TransTasman Angus Cattle Evaluation

## What is the TransTasman Angus Cattle Evaluation?

The TransTasman Angus Cattle Evaluation is the genetic evaluation program adopted by Angus Australia for Angus and Angus influenced beef cattle. The TransTasman Angus Cattle Evaluation uses Best Linear Unbiased Prediction (BLUP) technology to produce Estimated Breeding Values (EBVs) of recorded cattle for a range of important production traits (e.g. weight, carcase, fertility).

The TransTasman Angus Cattle Evaluation is an international genetic evaluation and includes pedigree, performance and genomic information from the Angus Australia and Angus New Zealand databases, along with selected information from the American and Canadian Angus Associations.

The TransTasman Angus Cattle Evaluation utilises a range of genetic evaluation software, including the internationally recognised BLUPF90 family of programs, and BREEDPLAN® beef genetic evaluation analytical software, as developed by the Animal Genetics and Breeding Unit (AGBU), a joint institute of NSW Agriculture and the University of New England, and Meat and Livestock Australia Limited (MLA).

## What is an EBV?

An animal's breeding value can be defined as its genetic merit for each trait. While it is not possible to determine an animal's true breeding value, it is possible to estimate it. These estimates of an animal's true breeding value are called EBVs (Estimated Breeding Values).

EBVs are expressed as the difference between an individual animal's genetics and a historical genetic level (i.e. group of animals) within the TACE genetic evaluation, and are reported in the units in which the measurements are taken.

## Using EBVs to Compare the Genetics of Two Animals

TACE EBVs can be used to estimate the expected difference in the genetics of two animals, with the expected difference equating to half the difference in the EBVs of the animals, all other things being equal (e.g. they are joined to the same animal/s).

For example, a bull with a 200 Day Growth EBV of +60 would be expected to produce progeny that are, on average, 10 kg heavier at 200 days of age than a bull with a 200 Day Growth EBV of +40 kg (i.e. 20 kg difference between the sire's EBVs, then halved as the sire only contributes half the genetics).

Or similarly, a bull with an IMF EBV of +3.0 would be expected to produce progeny with on average, 1% more intramuscular fat in a 400 kg carcase than a bull with a IMF EBV of +1.0 (i.e. 2% difference between the sire's EBVs, then halved as the sire only contributes half the genetics).

## Using EBVs to Benchmark an Animal's Genetics with the Breed

EBVs can also be used to benchmark an animal's genetics relative to the genetics of other Angus or Angus infused animals recorded with Angus Australia.

To benchmark an animal's genetics relative to other Angus animals, an animal's EBV can be compared to the EBV reference tables, which provide:

- the breed average EBV
- the percentile bands table

The current breed average EBV is listed on the bottom of each page in this publication, while the current EBV reference tables are included at the end of these introductory notes. For easy reference, the percentile band in which an animal's EBV ranks is also published in association with the EBV.

## Considering Accuracy

An accuracy value is published with each EBV, and is usually displayed as a percentage value immediately below the EBV.

The accuracy value provides an indication of the reliability of the EBV in estimating the animal's genetics (or true breeding value), and is an indication of the amount of information that has been used in the calculation of the EBV.

EBVs with accuracy values below 50% should be considered as preliminary or of low accuracy, 50-74% as of medium accuracy, 75-90% of medium to high accuracy, and 90% or greater as high accuracy.

## Description of TACE EBVs

EBVs are calculated for a range of traits within TACE, covering calving ease, growth, fertility, maternal performance, carcase merit, feed efficiency and structural soundness. A description of each EBV included in this publication is provided on the following page.

# UNDERSTANDING ESTIMATED BREEDING VALUES (EBVs)

Calving Ease	CEDir	%	Genetic differences in the ability of a sire's calves to be born unassisted from 2 year old heifers.	Higher EBVs indicate fewer calving difficulties in 2 year old heifers.
	CEDtrs	%	Genetic differences in the ability of a sire's daughters to calve unassisted at 2 years of age.	Higher EBVs indicate fewer calving difficulties in 2 year old heifers.
	GL	days	Genetic differences between animals in the length of time from the date of conception to the birth of the calf.	Lower EBVs indicate shorter gestation length.
	BW	kg	Genetic differences between animals in calf weight at birth.	Lower EBVs indicate lighter birth weight.
Growth	200 Day	kg	Genetic differences between animals in live weight at 200 days of age due to genetics for growth.	Higher EBVs indicate heavier live weight.
	400 Day	kg	Genetic differences between animals in live weight at 400 days of age.	Higher EBVs indicate heavier live weight.
	600 Day	kg	Genetic differences between animals in live weight at 600 days of age.	Higher EBVs indicate heavier live weight.
	MCW	kg	Genetic differences between animals in live weight of cows at 5 years of age.	Higher EBVs indicate heavier mature weight.
	Milk	kg	Genetic differences between animals in live weight at 200 days of age due to the maternal contribution of its dam.	Higher EBVs indicate heavier live weight.
Fertility	DtC	days	Genetic differences between animals in the time from the start of the joining period (i.e. when the female is introduced to a bull) until subsequent calving.	Lower EBVs indicate shorter time to calving.
	SS	cm	Genetic differences between animals in scrotal circumference at 400 days of age.	Higher EBVs indicate larger scrotal circumference.
Carcase	CWT	kg	Genetic differences between animals in hot standard carcase weight at 750 days of age.	Higher EBVs indicate heavier carcase weight.
	EMA	cm <sup>2</sup>	Genetic differences between animals in eye muscle area at the 12/13th rib site in a 400 kg carcase.	Higher EBVs indicate larger eye muscle area.
	Rib Fat	mm	Genetic differences between animals in fat depth at the 12/13th rib site in a 400 kg carcase.	Higher EBVs indicate more fat.
	P8 Fat	mm	Genetic differences between animals in fat depth at the P8 rump site in a 400 kg carcase.	Higher EBVs indicate more fat.
	RBY	%	Genetic differences between animals in boned out saleable meat from a 400 kg carcase.	Higher EBVs indicate higher yield.
Feed/ Temp.	IMF	%	Genetic differences between animals in intramuscular fat (marbling) at the 12/13th rib site in a 400 kg carcase.	Higher EBVs indicate more intramuscular fat.
	NFI-F	kg/day	Genetic differences between animals in feed intake at a standard weight and rate of weight gain when animals are in a feedlot finishing phase.	Lower EBVs indicate more feed efficiency.
	Doc	%	Genetic differences between animals in temperament.	Higher EBVs indicate better temperament.
Structure	Foot Angle	score	Genetic differences in foot angle (strength of pastern, depth of heel).	Lower EBVs indicate more desirable foot angle.
	Claw Set	score	Genetic differences in claw set structure (shape and evenness of claws).	Lower EBVs indicate more desirable claw structure.
Selection Index	\$A	\$	Genetic differences between animals in net profitability per cow joined in a typical commercial self replacing herd using Angus bulls. This selection index is not specific to a particular market end-point, but identifies animals that will improve overall net profitability in the majority of commercial, self replacing, grass and grain finishing beef production systems.	Higher selection indexes indicate greater profitability.
	\$A-L	\$	Genetic differences between animals in net profitability per cow joined in a typical commercial self replacing herd using Angus bulls. This selection index is not specific to a particular market end-point, but identifies animals that will improve overall net profitability in the majority of commercial, self replacing, grass and grain finishing beef production systems.	Higher selection indexes indicate greater profitability.
			The \$A-L index is similar to the \$A index but is modelled on a production system where feed is surplus to requirements for the majority of the year, or the cost of supplying additional feed when animal feed requirements increase is low.  While the \$A aims to maintain mature cow weight, the \$A-L does not aim to limit the increase in mature cow weight as there is minimal cost incurred if the feed maintenance requirements of the female breeding herd increase as a result of selection decisions.	

TransTasman Angus Cattle Evaluation - August 2022 Reference Tables

R161 is a sire used throughout the stud program as a yearling and returned to sale condition off crop this young sire has a wide hip and a ham that emphasises a type that we are striving to achieve. He is a grandson of Koupals identity, and it must be noted from a sire Identity P127 purchased by Ferdie Foster from Rosedale Angus, Tasmania. in 2019, he was one of 3 flush brothers that lit up the sale of that year.

R207 is superbly put together, a bull that will leave plenty of good daughters. With a pedigree that would align beautifully when we're doing spring joinings at Milwillah. The K12, Elevator E11 common thread (K12 is the of Moonshine M131 sire). This bull will be used heavily for his pedigree, weight for age and calving ease combination along with his exceptional straight 5 structural information- I feel he is a young sire with a big future.

R345 is another young sire that keeps catching the eye. By sale time this bull will be one to tick up heavily. The identity Sons and Grandsons are ideally suited to our program, with a common thread of early fat cover, softness and fertility from the maternally emphasised programs of Matauri and Milwillah, coupled with the shear capacity and base width of K. Identity I feel this will be a line that is used heavily into the future. The identity females are proving their worth and are starting show up in top tier bulls. Used as a yearling and a heifers first calf.

Purchaser: Price:  
 S15 is one of my picks of the younger bulls by outstanding young sire Padua P108 and again the combination of top donor cows excites me. K26 and E35 are amongst our best, and I feel this bull like his father can make a real impact. Use over cows and Heifers.

R1026 is a Powerpoint son from the "Australian made" dreamline that has made an impact over the last decade. Adding M.Reality to this sireline ensured Dream L18 quickly rose to the top of her contemporary group and has been part of the donor herd since. L18 is a full sister to Lannister L20, who's claim to fame apart from lighting up the sales for the Buchan Station Boys in Gippsland Victoria sired promising young sire Nardoo N155. R1026 has had heavy use at a young age within herd.

R337 is a promising young sire that has "been on the tools" from a young age. We enjoy putting these young sires through their paces! With extra bone and body depth he is one that should be looked at closely for capacity. Mooshine M131 himself has an extraordinary ability to recover he has been bred Autumn and Summer joinings consistantly for years and always delivers. A bull with his libido has and will continue to play an important role in the ultrablack and Angus herd for his ability to improve fertility/ constitution in herd and calving ease.

Purchaser: Price:

R403 is a son of Krakatoa R426 and Grandson of Krakatoa K92, a sireline that many say is one of the best for improving foot shape and heel depth in Australia. R403 is a long bodied, structurally sound sire that has been used heavily back over the Powerpoint and Identity lines to lengthen the front, and hip to pin on these imported sire-lines. R403 and his father R426 will add more frame and body length than Krakatoa K92. This sire has been pastured with 1st calvers throughout late spring and early summer. Barunah H224 and Elevator E11 forever present in these pedigrees.

Purchaser: Price:

R148 another pedigree that includes Barunah K26, this time from the identity Line. Identity P127 was one of 3 flush brothers that lit up our 2019 sale. K26 descendants are in demand and need to be looked at closely for their maternal upside. Used as yearling.

R273 is another heifer bull option, that has been used extensively used as a yearling, soft as you like and a typical Moonshine soundness to this young sire.

Price:

Powerbroker S706 is the first of the Powerbroker Q11 progeny. Powerbroker was the topselling junior bull in 2020. Powerbroker was exceptional in both feet and legs, length of body and peaceful in nature. His Dam is an exceptional young Hector sired cow that has joined the Donor ranks. Like Reality I look for Hector in pedigrees for stability and consistency. Powerbroker was an ideal way to spread Powerpoint and Hector blood through the herd- Many preferred Powerbroker to S. Powerpoint. Suitable for heifers.

R160 is a bull that will excite both the red and black angus world, His mother is a maternal sister to Milwillah Marble Bar. Marble Bar, has sold semen globally and I feel had an extremely positive influence on the breed. Interesting bull here that has huge appeal on type, pedigree and EBV combination. Suitable for heifer joinings.

R465 is a bull with an exciting combination of pedigree, and a page that is easy on the eye. I love filling the backend of the catalogue with these sort of bulls. Consistency and depth is key in what we are try to achieve at Milwillah.Used heavily as a yearling and suitable for heifers.

# RECESSIVE GENETIC CONDITIONS

This is information for bull buyers about the recessive genetic conditions, Arthrogryposis Multiplex (AM), Hydrocephalus (NH), Contractural Arachnodactyly (CA) and Developmental Duplications (DD).

## Putting undesirable Genetic Recessive Conditions in perspective

All animals, including humans, carry single copies (alleles) of undesirable or "broken" genes. In single copy form, these undesirable alleles usually cause no harm to the individual.

But when animals carry 2 copies of certain undesirable or "broken" alleles it often results in bad consequences. Advances in genomics have facilitated the development of accurate diagnostic tests to enable the identification and management of numerous undesirable or "broken" genes.

Angus Australia is proactive in providing its members and their clients with relevant tools and information to assist them in the management of known undesirable genes and our members are leading the industry in their use of this technology.

## What are AM, NH, CA and DD?

AM, NH, CA and DD are all recessive conditions caused by "broken" alleles within the DNA of individual animals. When a calf inherits 2 copies of the AM or NH alleles their development is so adversely affected that they will be still-born.

In other cases, such as CA and DD, calves carrying 2 copies of the broken allele may reach full-term. In such cases the animal may either appear relatively normal, or show physical symptoms that affect their health and/or performance.

## How are the conditions inherited?

Research in the U.S. and Australia indicates that AM, NH, CA and DD are simply inherited recessive conditions. This means that a single gene (or pair of alleles) controls the condition.

For this mode of inheritance two copies of the undesirable allele need to be present before the condition is seen; in which case you may get an abnormal calf. A more common example of a trait with a simple recessive pattern of inheritance is black and red coat colour.

Animals with only one copy of the undesirable allele (and one copy of the normal form of the allele) appear normal and are known as "carriers".

## What happens when carriers are mated to other animals?

Carriers, will on average, pass the undesirable allele to a random half (50 %) of their progeny.

When a carrier bull and carrier cow is mated, there is a 25% chance that the resultant calf will inherit two normal alleles, a 50% chance that the mating will result in a carrier (i.e. with just 1 copy of the undesirable allele, and a 25% chance that the calf will inherit two copies of the undesirable gene.

If animals tested free of the undesirable gene are mated to carrier animals the condition will not be expressed at all. All calves will appear normal, but approximately half (50%) could be expected to be carriers.

## How is the genetic status of animals reported?

DNA-based diagnostic tests have been developed which can be used to determine whether an individual animal is either a carrier or free of the alleles resulting in AM, NH, CA or DD.

Angus Australia uses advanced software to calculate the probability of (untested) animals to being carriers of AM, NH, CA or DD. The software uses the test results of any relatives in the calculations and the probabilities may change as new results for additional animals become available.

The genetic status of animals is being reported using five categories:

AMF	Tested AM free
AMFU	Based on Pedigree AM free - Animal has not been tested
AM_%	-% probability the animal is an AM carrier
AMC	Tested AM-Carrier
AMA	AM-Affected

For NH, CA and DD, simply replace AM in the above table with NH, CA or DD.

Registration certificates and the Angus Australia web-database display these codes. This information is displayed on the animal details page and can be accessed by conducting an "Database Search" from the Angus Australia website or looking up individual animals listed in a sale catalogue.

## Implications for Commercial Producers

Your decision on the importance of the genetic condition status of replacement bulls should depend on the genetics of your cow herd (which bulls you previously used) and whether some female progeny will be retained or sold as breeders.

Most Angus breeders are proactive and transparent in managing known genetic conditions, endeavouring to provide the best information available. The greatest risk to the commercial sector from undesirable genetic recessive conditions comes from unregistered bulls with unknown genetic background. The genetic condition testing that Angus Australia seedstock producers are investing in provides buyers of registered Angus bulls with unmatched quality assurance.

For further information contact Angus Australia's Breed Development & Extension Manager on (02) 6773 4618.

# DISCLAIMER AND PRIVACY INFORMATION

## Attention Buyer

Animal details included in this catalogue, including but not limited to pedigree, DNA information, Estimated Breeding Values (EBVs) and Index values, are based on information provided by the breeder or owner of the animal. Whilst all reasonable care has been taken to ensure that the information provided in this catalogue was correct at the time of publication, Angus Australia will assume no responsibility for the accuracy or completeness of the information, nor for the outcome (including consequential loss) of any action taken based on this information.

## Parent Verification Suffixes

The animals listed within this catalogue including its pedigree, are displaying a Parent Verification Suffix which indicates the DNA parent verification status that has been conducted on the animal. The Parent Verification Suffixes that will appear at the end of each animal's name.

The suffix displayed at the end of each animal's name indicates the DNA parentage verification that has been conducted by Angus Australia.

PV : both parents have been verified by DNA.

SV : the sire has been verified by DNA.

DV : the dam has been verified by DNA.

# : DNA verification has not been conducted.

E : DNA verification has identified that the sire and/or dam may possibly be incorrect, but this cannot be confirmed conclusively.

## Privacy Information

In order for Angus Australia to process the transfer of a registered animal in this catalogue, the vendor will need to provide certain information to Angus Australia and the buyer consents to the collection and disclosure of that information by Angus Australia in certain circumstances. If the buyer does not wish for his or her information to be stored and disclosed by Angus Australia, the buyer must complete the form included below and forward it to Angus Australia. If the form is not completed, the buyer will be taken to have consented to the disclosure of such information.

.....

## BUYERS OPTION TO OPT OUT OF DISCLOSING PERSONAL INFORMATION TO ANGUS AUSTRALIA

If you do not complete this form, you will be taken to have consented to Angus Australia using your name, address and phone number for the purposes of effecting a change of registration of the animal(s) that you have purchased, maintaining its database and disclosing that information to its members on its website.

I, the buyer of animals with the following idents.....

.....

from member.....(name) do not consent to Angus Australia using my name, address and phone number for the purposes of effecting a change of registration of the animals I have mentioned above that I have purchased, maintaining its database and disclosing that information to its members on its website.

Name: ..... Signature: .....

Date: .....

Please forward this completed consent form to Angus Australia, 86 Glen Innes Road, Armidale NSW 2350.

.....

If you have any questions or queries regarding any of the above, please contact Angus Australia on (02) 6773 4600 or email [office@angusaustralia.com.au](mailto:office@angusaustralia.com.au)

Updated 25/11/2020

## LOCATION MAP

### Milwillah Sale Complex

is located at "Clover Hill" cattle yards, Berthong Road,  
approximately 21km from Young,  
60km from Temora and 40km from Cootamundra.

If coming from Young, drive out of town on the Temora Road for 20km.  
Here there will be a left turn onto the Berthong Road  
and "Clover Hill" yards are located at the top of the  
hill on the right 1km from the turn off.
