

BIARA

SANTA GERTRUDIS

19th Annual Sale

9 APRIL 2024

Sale commences at 12.00pm

BIARA SANTA GERTRUDIS

Biara Santa Gertrudis was established in 1976 with the purchase of bulls from Orleans Farms in Esperance.

These classified bulls went over an Angus / Hereford / AIS cross herd. Herd grading up was a slow business so cows were purchased from Mt Ty in Queensland, Orleans Farm, Koorabup, Bahloo and Gundamain in WA to hasten the process.

Quality classified bulls have since been purchased from Rosevale, Gylanda, Eidsvold Stn, Yarrawonga, Wave Hill Greenup and Kelly Wallah.

Poll cattle have played an important part in our herd with at least 85% of the cows being polled. Future plans will involve these numbers of polled cattle increasing.

Biara's breeding objectives have always been to produce moderate sized cattle with good doing ability, lots of muscle, are fertile and with good early growth figures but are able to grow on as steers. These objectives have enabled our cattle to fit into the export, local and the Jap ox markets and are as important today as the day we started.

Our breeding herd is run as a commercial herd with hay the only supplementary feeding during the break of the season. Heifers calve at 2 years of age and cows should calve every year. They are allowed to miss one pregnancy during their life if seasons go against them.

Bull calves are weaned onto stubbles then grazed on oats before being finished on grain for 40-60 days pre-sale.

We are well aware that too much feed shortens a bulls working life and we are looking for a balance between presentation and presenting fit, fertile and quiet young bulls for sale.

EBVs have been used extensively in our herd and over the last few years and we have come to trust these figures in selecting replacements along with our strict visual assessment for structural soundness, fertility, doing ability and temperament. We are now focusing on producing polled bulls for sale by using mostly (PP) sires.

The Hasleby family wish to extend an invitation to attend our on farm bull sale on Tuesday 9 April, 2024.

We very much look forward to seeing you here.

BIARA

SANTA GERTRUDIS

19th Annual Sale

9 APRIL 2024

Sale commences at 12.00pm

The **Hasleby family** will offer for public auction:

111 Santa Gertrudis bulls 56 (PP) 54 (P) or (PS) 47 Classified S

Wendy Gould, Wendalla Stud will offer:

6 Santa Gertrudis bulls (6 polled, 6 classified)

Ph: 0418 947 521

PRE-SALE INSPECTIONS WELCOME ANY TIME.

For further information ring:

NOTE TO BUYER

Auction Plus

Sale will be streamed on Auction Plus.

Semen Test

All bulls will have undergone a motility and morphology semen test. Results on sale day.

Poll Horn Test

Selected bulls have undergone PP test.

Pic No.

Buyers, please present your Pic No at registration on the day.

Delivery instruction sheet

At the back of the catalogue must be filled in prior to taking delivery of bulls.

Sale supplementary sheet

Provided on sale day.

Transport

Bulls can be delivered to Coolina if required and travel to Qld can be arranged for \$1200 approximately.

Inspection

Bulls will be yarded for inspection by 10.30pm on the day of the sale. Inspection welcomed prior to the sale by appointment.

Health

All bulls receive Vibrio, 7 in 1 and Pestigard vaccinations and tested BVDV negative, prior to sale and as weaners.

Biara is J-BAS 8 accredited.

Airstrip

Northampton Airstrip is approx 5 kms from Biara farm.

Contact John for more details on 0438 341 027.

All care is taken that information is correct to the best of our knowledge.

Biara is situated at 253 Blue Well Road, East Bowes, 16km east of Northampton.

See map below:

Group Plan EBV's

Notes on Group Breedplan EBVs

BREEDPLAN is a genetic evaluation system for beef cattle that uses all pedigree and performance information known about an animal and its relatives to calculate Estimate Breeding Values (EBVs). EBVs are the best estimate of the genetic merit of an animal for each trait measured.

EBVs are free from environmental influences that play a significant part of the observed performance of an animal. Units of measurement for EBVs depend on the trait; for example, growth traits are in kilograms and fat depth in millimetres.

The GROUP analysis for Santa Gertrudis BREEDPLAN is processed by ABRI (agricultural Business Research Institute) from the integrated pedigree / performance database of the Santa Gertrudis Breeder's (Australia) Association.

NB: GROUP BREEDPLAN EBVs can be compared with animals in other Santa Gertrudis Herds but not with animals in other breeds. It is important when assessing GROUP EBVs of a particular animal, to compare them with the average of the breed. The average of 2013 drop calves is used as the measurement of the current genetic level of the breed.

How to use EBVs

The first step is to decide what characteristics are important in your breeding program, then select EBVs which fit the bill for your herd. For example, if you are selling 14-month-old steers and the last draft you sold could have been heavier without prejudicing your market, then you should look for a bull with a high EBV for 400 day wt.

Are bulls with negative EBVs worth buying?

Yes. They can be. EBVs are a guide to help in selection – not the only selection criteria you should use.

200 Day Milk and Growth:

The vealer producer should place emphasis on the 200-day growth and milk genes. If the bull is to be used as a terminal sire, growth is most important. If the bull is to be used to breed replacement heifers and superior milking and mothering ability is required, then pay close attention to the EBVs for milk (kg). The estimate in kg milk is not the yield of milk of the dam, but the growth of the calf due to more milk and better mothering in the dam.

400 Day WT:

400 Day Wt EBVs are a measure of the animal's ability to grow to 400 days of age (can be measured from 301-500 days). It should be used by producers who wish to turn off yearling cattle.

600 Day WT:

600 Day Wt EBVs are computed for growth to 600 days of age (can be measured at 501-900 days of age). In production systems for heavy steers, this is important. It is the best prediction of an animal's ability to grow on to maturity.

Semen Tested Bulls

Biara is focused on presenting functional, fertile bulls so all bulls have been assessed for semen morphology and motility.

Quality and results will be on our supplementary sheets on sale day. We believe that morphology plays

a major part of overall herd fertility.

Morphology of the sperm cell is now recognised as the most important measure of fertility in a bull.

Results of the Bull Power Project showed that higher percent normal sperm of a bull was the trait most correlated to higher calf output. In addition, research is showing that percent normal sperm is correlated to the future reproduction performance of both male and female progeny.

Horn - Poll Test

In our quest to produce polled bulls, we are now using 10 (PP) bulls as sires as well as **56 sale** bulls that have passed a homozygous **(PP)** test this year, meaning that it is likely that 98% of their offspring will be polled. These will be recognised with a **(PP)** behind their name in this catalogue.

Poll Scur Gene

Poll Scur gene is not linked to the Poll - Horned gene. A scur is a horn like structure that is not attached to the skull and may vary in size from a tiny button to almost horn like length. For females to show scurs it needs two copies of the gene, where as a male only needs one copy of the gene to show a scur.

The vast majority of scurred animals only exhibit a very small amount of scur for the entirety of their life.

SIRES OF SALE BULLS

SIRE

ROSEVALE MONTY M 482 (PP)

Rosevale Monty (P) was purchased in 2017 for \$42,000 and is a PP bull meaning 98% of his progeny will be polled, a trait we were looking for, alongside of 85% morphology semen and a perfect sheath.

Monty is a massive sire, slightly later maturing bull as his figures suggest but comes in a package that suits us, dark red colour and shiny coat, lots of breed character, perfect feet and legs and is very thick with the ability to finish or to lay down fat.

A bull we think will leave a lot of good females as well as many good sale bulls. First bulls sold in 2020.

GROUP BREEDPLAN FIGURES

200D Milk	200D Wt	400D Wt	600D Wt	Mat Wgt	DTC	SS	EMA	Rib Fat	Rump Fat	IMF	\$ Index Value	
											Domestic	Export
+5	+18	+28	+38	+25	+7.9	+4.7	+4.0	+1.6	+1.5	+0.1	+12	+8

SIRE

ROSEVALE QUOTATION Q216 (PP)

Rosevale Quotation was purchased privately in June 2021 to shore up our sire battery when we purchased 50 Rosevale cows and calves.

He has extremely good fertility and fat data, is a **PP sire**, very good sheath and excellent confirmation which shows up in his mobility to cover most of the heifers we put him too.

He is a sire to further enhance our fertility at Biara.

GROUP BREEDPLAN FIGURES

200D Milk	200D Wt	400D Wt	600D Wt	Mat Wgt	DTC	SS	EMA	Rib Fat	Rump Fat	IMF	\$ Index Value	
											Domestic	Export
+2	+8	+5	+5	+0	-16	+0.3	+1	+4.4	+5.5	+0.8	+18	+32

SIRE

ROSEVALE NAUTICAL N20 (PP)

Nautical was purchased for \$34,000 in 2018 from Rosevale sale to upgrade our sire battery of (PP) bulls. He is a very deceptively heavy bull, very well balanced, soft, very quiet, dark red, with a sheath to improve any herd and is a bull who is always fat. He is a very good doing bull as evidenced by his fat figures.

All this in a moderate frame with EBV's to back up his raw data and very good fertility data. After a delayed start due to a leg injury we now have calves on the ground and they are as impressive as we had hoped them to be with both growth and eye appeal.

Nautical did a season at Rosevale before coming to WA and 6 of his sons sold in the 2021 Rosevale sale to average \$18,333.

We are very impressed with the consistency of his calves and he has very quickly become our go to sire.

GROUP BREEDPLAN FIGURES

200D Milk	200D Wt	400D Wt	600D Wt	Mat Wgt	DTC	SS	EMA	Rib Fat	Rump Fat	IMF	\$ Index Value	
											Domestic	Export
-3	+15	+29	+43	+40	-4.2	+2.2	+2.2	+2.4	+2.7	+0.6	+20	+32

SIRE **GYRANDA NEWTON N202 (PP)**

Gyranda Newton was purchased in partnership with the Rosevale stud and will do a season every 6 months on both sides of the country.

Newton is a very heavy, well muscled **(PP)** bull, who is very quiet, dark red in colour, very correct confirmation.

He has a combination of muscle, fats, DTC of -10.5 (fertility) and **96% morphology**, that we don't see very often in our travels so we couldn't let the opportunity go to purchase this **(PP)** bull.

6 bulls by Newton were sold in the Gyranda and Rosevale sales in 2021 and averaged \$19,668.

His progeny are showing constitution, depth of body, and doing ability that has us excited about this sire.

GROUP BREEDPLAN FIGURES												
200D Milk	200D Wt	400D Wt	600D Wt	Mat Wgt	DTC	SS	EMA	Rib Fat	Rump Fat	IMF	\$ Index Value	
											Domestic	Export
-1	+11	+18	+31	+48	-6.1	+0.4	+4.2	+1	+0.5	+0.5	+25	+38

SIRE **GYRANDA P678 PROVERB (PP)**

Gyranda Proverb (PP) was purchased for \$16,000 in 2019. He is a very dark, slick coated bull, although he is not a big bull, he has tremendous thickness and width with a very neat sheath and from a sire and grand sire line that is well known for ease of calving.

We think he will fit into our markets in the West, homozygous polled, early maturing, moderate frame and explosive early growth and sire appeal. Calves are on the ground and we are sure they will impress in next years sale.

His calves have that tremendous thickness and are very docile.

GROUP BREEDPLAN FIGURES												
200D Milk	200D Wt	400D Wt	600D Wt	Mat Wgt	DTC	SS	EMA	Rib Fat	Rump Fat	IMF	\$ Index Value	
											Domestic	Export
-4	+23	+34	+44	+38	+3.8	+1.5	+4.5	+1	+1.8	+0.2	+24	+22

SIRE **ROSEVALE ONTARIO P604 (PP)**

Rosevale Ontario (PP) appealed to us for his very correct structure, homozygous poll, docile nature, sire appeal, neat sheath, softness and moderate frame.

Even though his figures are a little behind we feel he will make an impact in our quest to add doing ability, quietness and softness into our herd.

GROUP BREEDPLAN FIGURES

BIARA SANTA GERTRUDIS STUD

In 2023 Biara Santa Gertrudis Stud has taken a new direction with family succession happening.

Glen, Zoe and their 4 girls are taking over the running of the Biara stud while Kasey, Cara and their 3 girls are taking control of the cropping side. John and Maree still remain in the background and are sometimes used as free labour. These changes haven't meant wholesale change of direction but just refining and putting more emphasis on those traits that have been so important to Biara.

The **breeding herd** has been increased to over 500 breeders so that has meant we are spread over 5 properties in 2 shires. Cattle look after themselves with little to no hand feeding done. They need the constitution to handle lean times. Most of our bulls are sold into the pastoral region so we need those animals to hold their condition in the tough times.

Our young bulls are weaned in December and then are grazed on stubble and tagasaste over the summer, no hand feeding. This sorts out those that just survive and those that thrive. They then go onto oats in late winter and stay there until late January when they may go onto grain fed rations. We are very aware that too much grain can shorten a bulls working life.

We could get our bulls a lot heavier, but we are confident in their DNA. We know that DNA doesn't change if the bulls are fat or skinny.

Temperament is a trait that we will not tolerate any more. We want our cattle to be naturally quiet, not quietened down. This is a trait that is heritable but also can be due to how they are handled.

Sheath is not a problem at Biara anymore as we have been very selective on this trait over many years. We will continue to do this without losing that tropical looseness. We very rarely cull animals for sheath anymore.

Fertility is paramount so we will leave no stone overturned to make sure we have the most fertile herd we can. We believe that fertility is the greatest driver of herd profitability. Some of the criteria we use to improve fertility are:

- if heifers don't calve at 2 year old they are culled.
- if cows don't conceive every year they are culled.

We have always purchased sires with high **morphology**. This strongly correlated to more calves by that bull, even in multiple sire herds. It has a part to play in female fertility of their offspring. We morphology test our sale bulls so that we know which bulls are fertile and cull the ones that don't

produce so you are not buying a sub fertile bull.

Polled animals have become necessary in today's climate, something we recognized several years ago. To enhance this we have been buying only homozygous bulls (bulls that will throw 98% polled offspring).

Confirmation remains at the forefront. Especially feet and legs as we run most of our cattle on beach sand. This helps prevent hooves wearing down.

Technology plays a big part in everyone's life nowadays, so we aim to use it to its fullest. Firstly, we want to measure a trait or as many traits as we can. This helps know what we are dealing with and being able to rectify shortcomings. We use sires and females that we know are measured stronger or better in that trait.

Our herd is one of the most tested bos indicus herds. Tested in WA with 200d, 400d, 600d, mature wt, scrotal, EMA, rib fat, rump, IMF, DTC. From this information a

Domestic and Export index is produced. This corresponds in earning more in dollar terms than another animal.

In addition, bulls are **semen morphology tested** in a lab, **Horn/Poll tested**, **gnomically tested** and **sire verified**. We believe all this is necessary so that we get the full picture, both visually and data wise. You the buyer can rest easy that you are getting what you are paying for.

Biara's objectives haven't changed since the beginning in Lloyd and Barbara's era. They have been written down many times, but I will repeat them;

To produce moderate sized cattle, with good doing ability, lots of muscle, are fertile and with good early growth but are able to grow on as steers.

Nothing has changed except we are using technology to make sure we are offering the best possible product to our clients.

BUY A

Biara Santa Gertrudis
homozygous bull (PP)
and dehorn your herd.

98%

of his progeny will be polled.

FUTURE SIRES

FUTURE SIRE EIDSVOLD STATION STANLEY S300 (PP)

Eidsvold Stn Stanley (PP) purchased in 2022 from the Greenup Stud. He was one of the best weight gainers in the sale plus he has many of the characteristics that we look for at Biara, dark colour, very good sheath, good muscling, correct structure, quiet nature and has good sire appeal. This is backed up by his balanced EBV's that shows us that he has the ability to lay down fat as well as ticking the boxes for fertility plus being a PP and having 91% morphology gives us great faith in this sire.

We are looking forward to getting him home and seeing his progeny.

GROUP BREEDPLAN FIGURES

200D Milk	200D Wt	400D Wt	600D Wt	Mat Wgt	DTC	SS	EMA	Rib Fat	Rump Fat	IMF	\$ Index Value	
											Domestic	Export
-1	+5	+19	+20	+29	-5.0	+1.1	+3.6	+0.6	+0.8	+0.3	+23	+28

FUTURE SIRE BIARA 1118 (PP)

Biara 1118 (PP) is the stand out of the 2021 drop, a bull we just had to keep. He is a big bodied bull with lots of volume, dark red sleek coat, heaps of sire appeal and quiet nature. As you can see by his figures he is in the top 1% for 200, 400, 600 day and mature weight, top 5% for EMA and carcase wt. He has a morphology result of 89%, is a PP and is a well balanced animal.

His dam Biara 7026 is an AI calf by Wightfields Downpour who has had 4 bull calves in 4 years. Her first calf by Rosevale Maverick sold to the Greenup stud for a record \$22,000, her second sold to Billabong Stn, 1118 is her 3rd and she has an outstanding weaner bull on her now and is PTIC to Rosevale Nautical.

GROUP BREEDPLAN FIGURES

											Domestic	Export
0	+28	+42	+65	+72	+1.9	+2.2	+4.5	+1	+0.9	0	+28	+39

FUTURE SIRE ROSEVALE TEMPLETON T222 (P)

Templeton (P) was purchased in 2023 and is the first non (PP) bull we have purchased for quite a while but we felt that we couldn't pass up this all round bull. T222 (P) is the picture-perfect type of bull we would like to reproduce to pass onto our clients to breed steers, yearlings or very fertile females.

For starters he is a dark sleek coated bull with a very good sheath, is very well balanced and just flows from nose to tail, testament to fantastic confirmation. His growth is well above average, fertility right up there and carcass and fats just as good, this results in his indexes being in the top 5% of the breed. Being only a (P) bull doesn't worry us as we have been using (PP) for many years now so there will be many (PP) heifers in our herd now and still many to come. Rosevale Templeton (P) will be used for 2 mating's at Biara, our normal mating and a second over the Rosevale cows and their offspring we purchased a few years ago.

GROUP BREEDPLAN FIGURES												
200D Milk	200D Wt	400D Wt	600D Wt	Mat Wgt	DTC	SS	EMA	Rib Fat	Rump Fat	IMF	\$ Index Value	
											Domestic	Export
0	+19	+31	+41	+59	-9.0	+2.5	+2.6	+2.1	+2.3	+0.7	+28	+44

FUTURE SIRE**ROSEVALE SWAGGER S374 (PP)**

Rosevale Swagger S374 (PP) is a bull we got to use due to a swap with Rosevale. He is a bull with a very fine sleek tropical coat, tidy sheath and fantastic EMA and fat data that are in the top 5% for the breed.

EMA and fats don't often come together but Swagger combines it along with above average growth, good DTC and is extremely quiet. We were very impressed so we asked if we could purchase him and reluctantly Rosevale agreed.

We feel, with his figures, we could use him as a heifer bull, breed females or produce good steers so he looks to be a very versatile bull.

GROUP BREEDPLAN FIGURES

FUTURE SIRE**ROSEVALE S202 (PP)**

This Rosevale Noah N50 (PP) son was purchased as a calf at foot when we purchased 50 Rosevale cows in 2021. He appealed to us as a dark coated, good sheathed, quiet young bull that we could use over heifers.

His fertility data is very good and has great sire appeal. His first drop of calves look very good and we have had no trouble at all in calving heifers down at 2 years of age.

He has adequate growth and is growing into a fair lump of a bull, but with his mobility we are sure he will still cover yearling heifers.

ROSEVALE NOAH N50
BIARA 0141 (P)
 BIARA 3029 (P)

Here's an interesting homozygous poll (PP) bull, our highest Export indexing bull of this year's draft at +48.

Biara 2112 (PP) has high end growth, high end fertility which are the main drivers of profitability in any herd. His dam Biara 0141 (P) is our highest indexing cow at +58 and has weaned a keeper heifer and PTIC, we expect big things from this line.

This is the first bull by our heifer mating specialist Rosevale Quotation Q216 (PP).

BIARA 0141 (P)'s calving 22

GYRANDA PROVERB P678 (PP)
 GYRANDA M727 (P)
 ROWANLEA ATOMIC (P)
BIARA 8090 (P)
 BIARA 5138 (P)

This homozygous poll (PP) bull is all performance, check out his 200 day EBV. This corresponds with his weaning weight as he was the heaviest calf weaned in that drop. With the help of genomic testing, we are seeing EBV's become more accurate to what we see. We have come to trust these in our herd, as they correlate very strongly with the weights. Biara 2118 (PP)'s dam has had 2 sale bulls and granddam is the mother of lot 2 so thickness is a feature of this line and of the Gyranda Proverb (PP) calves.

BIARA SALE BULLS

Having our own on property sale has allowed us to **NOT** target a sale weight or compete for the heaviest bulls in a multi sale, so our sale bulls are not pushed with grain and if seasons are not good then bulls will be lighter but will have enough finish on them to show their attributes.

Biara is all about breeding **functional, fertile** bulls that are treated much the same as any commercial animal.

We are very aware that a big grain ration will shorten a bulls working life and **we want our bulls capable of lasting 2-3 times more than the average working life of a bull.**

WENDALLA SANTA GERTRUDIS STUD

Wendalla Santa Gertrudis stud, number 939, was registered by Alan and Pauline Gould at Carnamah in 1974, with the purchase of females from WA's inaugural Santa Gertrudis stud, Woolawa, Walebing and later relocated to Mogumber in 1998.

In addition to grading up, females were subsequently purchased from Queensland, South Australia and local studs including breed founder King Ranch, Glen Gillian and Forrest Hill studs and sires have been utilised predominantly from Wave Hill, Goonoo Goonoo, Gyranda, Yarrawonga, Bullamakinka, Walmona and Nangaringa.

The stud was purchased by Wendy Gould in 2013 and is now run at Bolgart and Chittering.

This year Wendalla will offer a team of 6 polled, classified S bulls, sons of Yarrawonga L736 (P),

Walmona Boss (P), Walmona Zenos (P) and Wendalla Showman S29(P), a son of Bullamakinka High Expectation H178 (P).

All bulls have been semen motility and morphology tested through Nutrien Breeding and also ear notch tested free from BVDV.

They have been vaccinated with Vibrovax and Ultravac 7in1.

Bulls have been raised on pasture, plus hay and lick blocks as required during the summer dry, and fed a limited pre-sale ration of pellets, to be presented for sale ready to work.

I would like to again thank the Hasleby family for providing the opportunity for Wendalla to be part of their annual on-property fixture.

Wendy Gould

 GYRANDA M727 (P)
 BIARA 8102 (P)
BIARA 5100
 BIARA 6152

This Gyranda Proverb (PP) calf has been a deceptively heavy weigher from weaning.

Biara 2181 (P) like most of the Proverb calves carry this moderate frame but heavy weights early on in their lives.

Great EMA with adequate fats to go with it.

His dam Biara 5100 has had 7 calves in 7 years and is PTIC with this being her 5th sale bull.

BIARA 5100's calving 17, 18, 19, 20, 21, 22, 23

START PROTECTION BEFORE CONCEPTION

Heifer vaccination against vibriosis has a positive impact.

Vibriosis is a major venereal disease and can cause infertility and abortion in cattle.

Protect your maiden heifers (over 18 months of age)

- One shot of Vibrovax® = 2 Years Protection (this covers the main period of risk)
- Prevent disrupted calving patterns and improve pregnancy rates

1. Schatz TJ, Colm RM, Hearnden MN, Australian Society of Animal Production 26th Biennial Conference 2006.

BIARA SALE BULLS

Having our own on property sale has allowed us to **NOT** target a sale weight or compete for the heaviest bulls in a multi sale, so our sale bulls are not pushed with grain and if seasons are not good then bulls will be lighter but will have enough finish on them to show their attributes.

Biara is all about breeding **functional, fertile** bulls that are treated much the same as any commercial animal.

We are very aware that a big grain ration will shorten a bulls working life and **we want our bulls capable of lasting 2-3 times more than the average working life of a bull.**
